

CONSTRUCTION OS

PRD - Government, Legal & Compliance Module

Full Product Requirements Document for Product, UX/UI, Frontend, Backend, Data, QA, Security, DevOps and Compliance Teams

Product purpose: Build the formal regulatory and legal governance layer of ConstructionOS - tracking what each company and project is legally required to do, what has been submitted, what authorities have decided, and whether operations are legally permitted to proceed.

Document control	Value
Document	PRD_Government_Legal_Compliance_Module
Version	1.0
Status	Implementation-ready product specification
Audience	Full-stack development team and product governance stakeholders
Primary routes	/legal, /legal/projects/:projectId, /legal/permits/:id, /legal/cases/:id
Access model	Permission-ready, tenant-isolated, confidentiality-aware
Workflow policy	Approval orchestration hooks only; central Approvals & Workflow Engine remains deferred
Integration policy	Self-contained initial release; external government/court integrations are future roadmap
Date	2026-08-05

46. Delivery Phases and Migration
47. Risks and Open Decisions
48. Page and Flow Registry

1. Executive Summary

The Government, Legal & Compliance Module is the formal regulatory and legal governance layer of ConstructionOS. It provides one structured, auditable system for regulatory requirements, permits, licences, applications, submissions, authority correspondence, inspections, compliance obligations, legal notices, disputes, court cases, fines, appeals, insurance compliance, property records, corporate filings and legal holds.

The module is designed for multi-company construction groups operating across multiple jurisdictions. It must support group-level oversight while preserving legal-entity ownership, project confidentiality, matter-based access and jurisdiction-specific configuration.

Permanent separation: Contracts governs agreements. Documents governs files and revisions. HSE and QA/QC govern operational compliance. Government, Legal & Compliance governs formal regulatory obligations, authority actions and legal proceedings.

1.1 Business outcomes

- Prevent work from continuing under expired, suspended or missing legal authorizations.
- Create one defensible audit trail from regulatory requirement through evidence and authority decision.
- Reduce missed deadlines for renewals, submissions, inspections, hearings, appeals and statutory filings.
- Make legal exposure, permit readiness and compliance gaps visible at project, company and group level.
- Keep privileged legal matters separate from general project access.
- Connect obligations to Tasks, deadlines to Calendar, costs to Finance and files to Documents without duplicating source data.

1.2 Product success indicators

Outcome	Target behavior
Permit readiness	Every active project shows current legal readiness and blocking reasons.
Deadline control	No legal or regulatory deadline exists only inside an uploaded PDF or personal spreadsheet.
Traceability	Every status, deadline, submission and authority response links to source evidence and audit events.
Confidentiality	Project access never automatically exposes privileged legal matters.
Operational safety	Expired or suspended work-critical authorizations propagate legal-readiness gates to Projects and Work Progress.
Scalability	The same data model supports multiple countries, authorities, permit types and corporate entities.

2. Product Vision and Outcomes

The product vision is to replace fragmented permit spreadsheets, legal email chains, disconnected filing calendars and informal compliance checklists with an enterprise-grade governance workspace. The system must remain usable by project teams while being rigorous enough for legal, compliance and executive users.

2.1 Product principles

1. Structured records before dashboards: dashboards must always drill into source records.
2. Files are evidence, not the business object: structured fields, deadlines, conditions and status live in this module; binary files live in Documents.
3. No silent overwrites: issued permits, verified deadlines, official decisions and submitted packages retain immutable history.
4. Configuration over hard-coding: jurisdictions, authority types, permit types, deadlines, confidentiality levels and numbering are configurable.

5. Legal holds override normal deletion and retention behavior.
6. System calculations are clearly labelled until verified by an authorized user.
7. External integrations remain optional; the initial release must work independently.

2.2 Core questions the module must answer

- Which permits, licences and authorizations are legally required for this company, project, site, asset or activity?
- Which requirements are applicable, satisfied, expiring, overdue, disputed or blocked?
- What has been submitted, to which authority, by whom, when and with what delivery proof?
- What official correspondence, notice, decision, inspection finding or court action has been received?
- What is the next legal deadline and who owns it?
- What operations are legally blocked and what conditions are required for release?
- What is the estimated and posted financial exposure?
- Which records are under legal hold or subject to privileged access?

3. Scope, Non-Goals and Assumptions

3.1 In scope

- Regulatory frameworks, jurisdictions and requirement templates.
- Permit, licence, application, submission, amendment and condition lifecycle management.
- Authorities, departments, contacts and submission channels.
- Official correspondence, regulatory inspections, notices and administrative orders.
- Compliance obligations, evidence and verification.
- Non-contractual claims, disputes, court/administrative cases and appeals.
- Fines, penalties, sanctions and payment-status references.
- Corporate compliance, statutory records, property/land legal records and utility authorizations.
- Legal opinions, powers of attorney, legal risks, legal holds and retention controls.
- Cross-module links, APIs, events, responsive UX, audit, analytics and testing.

3.2 Out of scope for v1

- Jurisdiction-specific legal advice or automatic legal conclusions.
- Direct electronic filing to government or court portals.
- Automatic legislation updates from external databases.
- Full contract authoring, negotiation or contractual claims management.
- Accounting journals, statutory finance, tax filing or payment execution.
- Electronic signature provider integrations.
- Central approval orchestration, which remains deferred to the final Approvals & Workflow PRD.
- AI-generated legal advice, case predictions or automatic compliance certification.

3.3 Assumptions

Assumption	Implication
Multi-tenant platform	Every record carries tenant and legal-company scope.
Multiple legal entities	Group dashboards consolidate without changing record ownership.
Multiple jurisdictions	Types and rules are configuration-driven.
Documents module available	Files are referenced by Document IDs and never duplicated.
Tasks and Calendar available	Obligations create execution and time projections through integration contracts.
Approvals deferred	Decision points expose hooks and states but no universal workflow designer is implemented here.

4. Domain Ownership and Source-of-Truth Boundaries

Domain	Owner	Government, Legal & Compliance responsibility
Formal agreements	Contracts	Reference contract terms, notices, claims and guarantees without duplicating clauses.
Files and revisions	Documents	Link structured legal records to controlled evidence.
Operational safety	HSE	Receive regulator-facing consequences and formal reporting requirements.
Technical quality	QA/QC	Receive statutory inspection and completion-certificate outcomes.
Accounting and payments	Finance	Send fees, fines, legal costs and exposure references; receive payment state.
Execution work	Tasks	Create linked actions; verify compliance separately from task completion.
Time views	Calendar	Publish deadline/event projections while retaining source ownership.
Projects and Work Progress	Projects / Work Progress	Publish legal-readiness gates; source modules enforce configured blocks.
Approvals	Future Approvals Engine	Store approval references and decision hooks only.

Core accounting rule: Legal records never directly post journal entries. The module records obligation, exposure and payment-reference context; Finance remains authoritative for posted financial data.

5. Users, Roles and Permission Model

5.1 Primary personas

Persona	Primary needs
Group General Counsel	Cross-company legal exposure, privileged matters, executive reporting and legal holds.
Company Legal Manager	Entity-specific permits, disputes, filings, notices and counsel coordination.
Government Affairs / Permit Coordinator	Applications, authority communication, submission packages and renewals.
Compliance Officer	Obligation register, evidence, verification, recurring filings and risk.
Project Manager	Project legal readiness, permit conditions, inspections and operational restrictions.
HSE / QA Regulatory User	Formal authority reporting arising from HSE or quality records.
Finance Legal User	Fees, fines, provisions, payments and legal cost references.
External Counsel	Matter-limited access to selected records and documents.
Auditor / Executive	Read-only, scoped reporting with source drill-down.

5.2 Access dimensions

- Tenant and corporate group.
- Legal company and branch.

- Project/site/property.
- Jurisdiction and matter team.
- Record type and confidentiality level.
- Explicit participant or counsel assignment.
- Field-level restrictions for privileged summaries, personal data and financial exposure.

5.3 Confidentiality levels

Level	Typical use	Default behavior
Standard	Permits, licences, routine submissions	Visible to authorized company/project users.
Restricted	Regulatory findings, fines, sensitive correspondence	Explicit role or scoped capability required.
Confidential	Legal disputes and strategy	Matter-team or explicit access.
Legal Privileged	Counsel advice and legal opinions	Never inherited from linked project.
Executive / Board	Strategic investigations and corporate matters	Executive-specific capability.
Litigation Restricted	Evidence, witness statements and case strategy	Case-team only with read audit.
External Counsel Only	Selected external-counsel workspace	Explicitly shared records only.

6. Information Architecture

6.1 Main navigation

- Executive Dashboard
- Government & Legal Register
- Projects
- Permits & Licences
- Applications & Submissions
- Authorities
- Official Correspondence
- Regulatory Inspections
- Compliance Obligations
- Legal Notices
- Claims & Disputes
- Court & Administrative Cases
- Fines & Penalties
- Appeals
- Insurance & Guarantees
- Corporate Compliance
- Property & Land Records
- Utility Authorizations
- Legal Opinions
- Powers of Attorney
- Reports
- Settings

6.2 Primary page hierarchy

```

/legal
  /dashboard
  /register
  /projects/:projectId
  /permits/:permitId
  /applications/:applicationId
  /authorities/:authorityId
  /inspections/:inspectionId
  /obligations/:obligationId
  /notices/:noticeId
  /cases/:caseId
  /fines/:fineId
  /appeals/:appealId
  /holds/:holdId
  /settings

```

6.3 Global page behaviors

- Breadcrumbs preserve corporate, project and matter context.
- Every page has a permanent business code, status, owner, confidentiality indicator and activity timeline.
- Lists support global search, advanced filters, saved views, column chooser, export and bulk actions where safe.
- Detail pages provide linked-record side panels without exposing unauthorized records.
- Archived records remain available through dedicated filters and do not disappear from historical links.

7. Executive Dashboard

7.1 KPI requirements

KPI group	Required KPIs
Authorizations	Active, expiring, expired, suspended and rejected permits/licences.
Submissions	Awaiting response, additional information requested, overdue authority responses.
Inspections	Scheduled, failed, corrective action required, reinspection due.
Obligations	Open, due soon, overdue, disputed, waived and verified.
Legal matters	Active notices, disputes, court cases, appeals and legal holds.
Financial exposure	Outstanding fines, estimated exposure, legal costs YTD, insurance claims.
Operational impact	Projects legally restricted, work-blocking authorizations, missing occupancy permissions.

7.2 Dashboard functional requirements

ID	Area	Requirement	Priority	Acceptance signal
GLC-DB-001	Dashboard	Every KPI must drill into a pre-filtered source list.	Must	Clicked KPI opens matching underlying records.
GLC-DB-002	Dashboard	Critical legal holds and work blocks must appear above non-critical analytics.	Must	Critical records are visible without scrolling on desktop.

ID	Area	Requirement	Priority	Acceptance signal
GLC-DB-003	Dashboard	Group users may consolidate companies without changing record ownership.	Must	Totals match scoped source records.
GLC-DB-004	Dashboard	Estimated exposure must be visually separated from posted Finance values.	Must	Labels and tooltips identify the value source.
GLC-DB-005	Dashboard	Users may save private dashboard filters and date ranges.	Should	Saved state restores on next visit.

8. Project Government & Legal Workspace

8.1 Header and status

- Project identity, owning company, jurisdiction and municipality.
- Primary authority, legal representative, permit coordinator and compliance owner.
- Overall regulatory status, construction legality status and occupancy readiness.
- Active restrictions, next deadline and missing evidence count.

8.2 Sections

8. Overview
9. Regulatory requirements
10. Permits and licences
11. Applications and submissions
12. Authority correspondence
13. Inspections
14. Notices and orders
15. Fines and penalties
16. Appeals
17. Legal cases
18. Property and land
19. Utility authorizations
20. Completion and occupancy
21. Insurance and guarantees
22. Compliance obligations
23. Documents
24. Calendar
25. Tasks
26. Activity timeline

8.3 Project legal status

Status	Meaning
Not Assessed	Applicability review not completed.
Requirements Identified	Required authorizations and obligations registered.
Application Phase	One or more critical authorizations are under preparation/review.
Partially Authorized	Some activities may proceed; others remain blocked.
Authorized	All configured critical requirements are satisfied.
Authorized with Conditions	Work may proceed subject to active permit conditions.
Restricted	Specific areas or activities are legally restricted.

Status	Meaning
Suspended	Authority or court action prevents configured operations.
Non-Compliant	One or more critical obligations are overdue or breached.
Closed / Archived	Project legal lifecycle completed and retained.

9. Regulatory Requirement Register

The requirement register defines what must exist before operational records are created. Requirements may be global templates or project/company-specific records.

9.1 Required fields

Field group	Fields
Identity	Requirement code, name, legal basis, jurisdiction, authority.
Applicability	Business activity, project phase, entity type, conditions and exclusions.
Required outputs	Permit/licence, submission, inspection, evidence and recurring report.
Responsibility	Legal company, owner, backup owner, responsible team.
Timing	Trigger, legal deadline, renewal interval, grace period and review cycle.
Impact	Work-blocking flag, financial consequence, operational consequence and risk level.
Evidence	Source document, linked legislation, proof requirements and verification state.

9.2 Applicability engine

- Applicability may target group, company, branch, project, site, building, unit, property, asset, activity, contractor or employee category.
- Rules are configuration-driven and versioned.
- System-suggested applicability must remain reviewable by an authorized user.
- A requirement may be marked Not Applicable only with reason and actor history.
- Changing applicability must recalculate linked compliance status without deleting historical records.

9.3 Status model

Not Applicable -> Applicable -> Evidence Missing -> Application Required -> Submitted -> Compliant
 Alternative states: Compliant with Conditions | Expiring | Overdue | Non-Compliant | Under Dispute | Waived | Superseded

10. Permits and Licences

10.1 Supported categories

- Planning and development permits
- Building and demolition permits
- Excavation, road occupation and traffic diversion permits
- Environmental, water discharge and utility permits

- Fire-safety, heritage, temporary-works and crane authorizations
- Operating, occupancy, use and completion authorizations
- Company, professional, transport, trade and facility licences
- Custom jurisdiction-specific permit and licence types

10.2 Permit Page

Section	Required content
Overview	Code, external number, type, status, authority, holder, dates and primary scope.
Authorized scope	Areas, activities, phases, assets and restrictions.
Conditions	Structured conditions, owners, deadlines, evidence and compliance state.
Inspections	Required and completed authority inspections.
Applications	Original application, renewal and amendment packages.
Financial	Fees, deposits, fine references and Finance links.
Documents	Original permit, addenda, drawings, correspondence and certificates.
Timeline	Every lifecycle event, status change, actor and source evidence.

10.3 Lifecycle

Requirement Identified -> Preparation -> Application Submitted -> Under Authority Review -> Additional Information Requested -> Decision Issued -> Active -> Renewal Due -> Renewed -> Expired -> Closed
 Alternative: Rejected | Withdrawn | Suspended | Revoked | Cancelled | Under Appeal | Superseded

10.4 Core requirements

ID	Area	Requirement	Priority	Acceptance signal
GLC-PRM-001	Permits	Original issued permits are immutable; changes use amendments/addenda.	Must	Original fields remain unchanged after issue.
GLC-PRM-002	Permits	Permit dates may generate calendar projections and renewal reminders.	Must	Calendar receives source-linked events.
GLC-PRM-003	Permits	Critical expiration or suspension recalculates project legal readiness.	Must	Affected project gate updates within event SLA.
GLC-PRM-004	Permits	Conditions support independent owners, due dates, recurrence and evidence.	Must	Condition status can differ from permit status.
GLC-PRM-005	Permits	Users cannot backdate Active status without explicit override capability and reason.	Must	Audit records actor, reason and original value.

11. Permit Amendments and Addenda

A permit amendment is a first-class record linked to the parent permit. It never rewrites the original authorization.

11.1 Amendment fields

- Amendment number and parent permit
- Authority, submission date, issue date and effective date
- Scope changed, conditions added/removed and areas affected
- Affected drawings, work packages and deadlines
- Expiry impact, supporting documents and current status

11.2 Lifecycle

Draft -> Submitted -> Under Review -> Issued -> Effective -> Superseded

11.3 Impact analysis

- Identify linked project areas, work packages, documents and requirements affected by the amendment.
- Warn when active work relies on superseded permit conditions.
- Recalculate legal-readiness gates only for affected scope where possible.
- Preserve all prior effective periods for audit and dispute reconstruction.

12. Applications and Formal Submissions

12.1 Submission types

- Permit/licence application
- Renewal or amendment request
- Regulatory report or compliance declaration
- Incident notification or inspection request
- Appeal, formal response, public consultation response or court filing
- Evidence package and custom submission

12.2 Package completeness

Validation	Behavior
Mandatory fields	Block Ready to Submit until complete.
Required documents	Validate Document IDs, issue state and expiry.
Authorized signatory	Check power-of-attorney or configured authority.
Fees	Show readiness/reference; Finance executes payment.
Drawings/forms	Validate required document classes and revisions.
Deadline	Warn on late preparation; never silently change legal date.
Delivery proof	Required before Receipt Confirmed where configured.

12.3 Lifecycle

Draft -> Package Complete -> Ready to Submit -> Submitted -> Receipt Confirmed -> Under Review -> Additional Information Requested -> Response Submitted -> Decision Received -> Closed
Alternative: Rejected | Returned Incomplete | Withdrawn | No Response | Under Appeal

12.4 Submission integrity

- A submitted package stores an immutable manifest of included documents and versions.
- Replacing a file after submission creates a new response or resubmission package.
- Delivery method, external reference and receipt evidence remain auditable.
- The system may report configured completeness but must not claim legal validity.

13. Authorities Register

13.1 Authority types

- Municipality, ministry, planning/building authority
- Environmental regulator, fire authority, labour inspectorate
- Tax/customs/property registry/court/arbitration body
- Utility, road, heritage, police and professional body
- Other configurable authority

13.2 Authority Page

- Official name, type, jurisdiction, address and departments
- Contacts, portal URLs, accepted delivery methods and working hours
- Required formats, fees and submission instructions
- Linked projects, applications, permits, inspections, correspondence and cases
- Descriptive historical response times with no guarantee wording
- Activity timeline and data-quality owner

13.3 Duplicate prevention

- Authority name, jurisdiction and registration identifiers participate in duplicate detection.
- Merge requires explicit review and preserves previous IDs as aliases.
- Historical records keep original authority snapshots for evidentiary accuracy.

14. Official Correspondence

14.1 Record types

- Incoming/outgoing letter
- Email record
- Notice or authority decision
- Request for information
- Inspection invitation or summons
- Warning, compliance request or legal demand
- Court communication or internal legal memorandum

14.2 Required fields

Group	Fields
Identity	Code, direction, subject, external reference, sender, recipient.
Dates	Received/sent date, response deadline, appeal deadline where relevant.
Context	Authority/court, project/company, permit, case, contract and responsible user.
Sensitivity	Legal significance, confidentiality and privileged status.
Evidence	Original document, attachments and delivery/receipt proof.
Execution	Response status, linked task, response document and closure reason.

14.3 Response states

Received -> Registered -> Under Review -> Response Required -> Response Drafted -> Response Sent -> Closed
Alternative: No Response Required

15. Regulatory Inspections

15.1 Scope

This module owns official authority inspections and their regulatory consequences. Operational inspections remain owned by HSE, QA/QC or Assets.

15.2 Inspection Page sections

- Inspection identity and authority
- Legal basis and scope
- Project/site/company and areas inspected
- People present and requested documents
- Findings, violations and conditions
- Required corrective actions and response deadlines
- Official report, evidence, reinspection and linked operational records

15.3 Outcomes

Outcome	Operational effect
Passed	No configured restriction.
Passed with Conditions	Track conditions and evidence.
Observation	Non-blocking follow-up may be required.
Corrective Action Required	Create obligation and optional Task.
Non-Compliant	Update legal readiness according to severity.
Partial Suspension	Block configured scope only.
Suspension / Closure Order	Apply legal hold/gate to affected operations.
Reinspection Required	Create source deadline and calendar projection.
Under Dispute	Keep outcome active unless legally suspended.

16. Compliance Obligation Register

16.1 Obligation types

- One-time obligation
- Recurring report or filing
- Renewal or mandatory inspection
- Fee payment
- Insurance or licence condition
- Environmental monitoring
- Court-ordered or settlement obligation
- Record-retention or public-disclosure requirement

16.2 Verification principle

Important: Task completion is not compliance. A linked Task may execute the work, but the obligation becomes Compliant only after required evidence is submitted and verified by an authorized role.

16.3 Lifecycle

Identified -> Assigned -> In Progress -> Evidence Submitted -> Verified -> Compliant
Alternative: Due Soon | Overdue | Non-Compliant | Disputed | Waived | Superseded | Closed

16.4 Recurrence

- Recurring obligations create occurrence records rather than overwriting one due date.
- Each occurrence stores its own evidence, verification and late history.
- Rule changes affect future occurrences only unless explicitly migrated.
- Calendar projections remain source-linked to each occurrence.

17. Legal Notices and Administrative Orders

17.1 Types

- Warning, improvement and prohibition notices
- Stop, suspension, demolition and enforcement orders
- Payment demands and regulatory summons
- Court injunctions, compliance directives and cease-and-desist orders

17.2 Notice Page

- Notice number, issuing authority, recipient and legal basis
- Issue/receipt/effective dates, response and appeal deadlines
- Affected company/project/site and operational scope
- Required actions, financial consequences and responsible owner
- Related inspection, case, fine, documents and response evidence

17.3 Lifecycle

Received -> Registered -> Assessed -> Response Required -> Action in Progress -> Response Submitted -> Resolved -> Closed
Alternative: Under Appeal | Escalated | Enforced | Superseded | Withdrawn

18. Claims and Disputes

The module owns regulatory, property, public, insurance and other non-contractual disputes. Contractual claims remain rooted in Contracts and may be linked when escalated to formal proceedings.

18.1 Dispute Page

- Parties, claimant/respondent role and jurisdiction
- Legal basis, description, remedies and amount claimed
- Limitation deadline, current position and responsible counsel
- Evidence, linked project/contract/asset/unit
- Negotiation history, settlement options, costs and full timeline

18.2 Lifecycle

Potential -> Registered -> Under Assessment -> Negotiation -> Formal Claim -> Proceeding -> Decision -> Enforcement -> Closed
 Alternative: Settled | Withdrawn | Dismissed | Under Appeal | Suspended

19. Court and Administrative Cases

19.1 Case types

- Civil, commercial, administrative, labour and tax matters
- Arbitration, mediation, regulatory hearings and enforcement proceedings
- Appeals and custom jurisdiction-specific proceedings

19.2 Case Page sections

27. Overview
28. Parties
29. Claims and remedies
30. Procedural history
31. Hearings
32. Deadlines
33. Evidence
34. Submissions
35. Decisions
36. Appeals
37. Financial exposure
38. Legal fees
39. Documents
40. Tasks
41. Calendar
42. Activity timeline

19.3 Deadline integrity

Field	Requirement
Legal basis	Mandatory for verified deadlines.
Original date	Preserved when extended or suspended.
Calculation method	Calendar days, business days or rule-specific formula.
Jurisdiction calendar	Holiday calendar used by calculation.
Verification	System-calculated dates remain unverified until confirmed.
Extensions	Stored as separate events with source evidence.
Ownership	Primary and backup owner required for critical deadlines.

19.4 Case lifecycle

Pre-Litigation -> Filed -> Admitted -> Preliminary Stage -> Evidence Stage -> Hearing -> Judgment -> Enforcement -> Closed
 Alternative: Stayed | Dismissed | Settled | Withdrawn | Under Appeal | Remanded

20. Fines, Penalties and Sanctions

20.1 Record behavior

- Government & Legal owns legal state, appeal state, original amount and deadline.
- Finance owns payment, outstanding balance and accounting references.
- Fine records may remain open after payment when appeal or enforcement status is unresolved.
- Interest and late-charge values may be estimated or received from the authority and must be source-labelled.

20.2 Lifecycle

Issued -> Under Review -> Payable -> Partially Paid -> Paid -> Closed
 Alternative: Under Appeal | Suspended | Reduced | Cancelled | Enforced

20.3 Requirements

ID	Area	Requirement	Priority	Acceptance signal
GLC-FIN-001	Fines	Linking a Finance payment must not overwrite legal status.	Must	Paid and Under Appeal can coexist where configured.
GLC-FIN-002	Fines	Appeal and payment deadlines are independent fields.	Must	Both appear in Calendar and validation.
GLC-FIN-003	Fines	Original amount is immutable; reductions use adjustment history.	Must	Audit shows each amount change source.

21. Appeals

21.1 Appeal record

- Decision being appealed and authority/court
- Appeal level, legal basis, appellant/respondent
- Appeal deadline, filing date and delivery proof
- Grounds, requested remedy and supporting evidence
- Hearing, outcome, costs and responsible counsel

21.2 Lifecycle

Potential Appeal -> Assessment -> Draft -> Filed -> Admitted -> Under Review -> Hearing -> Decision -> Closed
 Alternative: Withdrawn | Rejected as Late | Dismissed | Remanded | Further Appeal

21.3 Deadline controls

- Late filing requires explicit acknowledgement and reason.
- Appeal deadlines may be calculated but remain unverified until confirmed.
- Filing creates an immutable submission manifest.
- Further appeal creates a new linked record rather than rewriting the prior appeal.

22. Insurance and Guarantees

22.1 Coverage

- Corporate, project, public liability and professional indemnity policies
- Construction all-risk, environmental, employer and asset coverage
- Performance, advance-payment, warranty, bid and court guarantees

22.2 Ownership boundary

Record	Primary owner	This module provides
Contract guarantee	Contracts	Regulatory adequacy and legal dispute links.
Asset coverage	Assets	Consolidated compliance and claim/legal links.
Employee benefits	HR	No medical details; only applicable compliance state.
Premium/payment	Finance	Payment and accounting references.
Legal claim/dispute	Government & Legal	Case, correspondence, outcome and exposure.

23. Property, Land and Utility Authorizations

23.1 Property records

- Land title, ownership certificate and leasehold right
- Easement, encumbrance, mortgage and restriction
- Parcel, cadastral map, boundary survey and right of way
- Expropriation, zoning, planning designation and property tax reference

23.2 Utility authorizations

- Electricity, water, sewer, gas and telecommunications
- Road access, drainage, waste and custom infrastructure
- Applications, technical conditions, fees, design approval, inspection, connection and final acceptance

23.3 Property Page requirements

- Permanent property code and parcel number
- Owner, ownership type, title reference and area
- Encumbrances, easements, disputes and linked projects
- Permits, units/buildings, valuation reference and document timeline

24. Corporate Compliance

24.1 Corporate records

- Company and branch registration
- Beneficial ownership and statutory registers
- Business licences, annual filings and board deadlines
- Tax-registration references and professional memberships
- Data protection, anti-bribery, competition and whistleblowing obligations
- Corporate powers of attorney and legal entity changes

24.2 Compliance calendar

- Annual returns and licence renewals
- Insurance and policy reviews

- Beneficial-owner updates
- Mandatory declarations and regulator reports
- Board and statutory filing deadlines

24.3 Group consolidation

Group dashboards may consolidate entity compliance, but every record retains legal-company ownership. Cross-company edits require explicit authority and must not be inferred from group visibility.

25. Legal Opinions and Powers of Attorney

25.1 Legal opinions

- Subject, requester, counsel, jurisdiction and legal question
- Assumptions, summary conclusion, risk rating and restrictions
- Related records, confidentiality, review date and superseded state

Privilege rule: Project access does not grant access to legal advice. Privileged records require matter-team or explicit legal capability.

25.2 Powers of attorney

- Grantor, representative, scope and jurisdiction
- Issue/effective/expiry/revocation dates
- Authorized actions, monetary limits and authority acceptance
- Notarization, apostille/legalization and source documents

25.3 Submission authorization check

Before configured formal submission actions, the system may verify that the selected signatory has an active power of attorney covering the action, jurisdiction and date. Failure blocks the action or requires an authorized override according to configuration.

26. Legal and Compliance Risk

26.1 Risk categories

- Permit and licence risk
- Regulatory breach
- Litigation and property/title exposure
- Environmental, HSE and tax/legal risk
- Data protection and insurance gaps
- Reputation, fraud/corruption and competition-law risk

26.2 Risk model

Field	Description
Source	Requirement, permit, notice, case, correspondence, audit or user entry.
Probability / impact	Configurable qualitative or quantitative scales.
Exposure	Estimated operational, financial, schedule and reputational impact.
Mitigation	Owner, actions, evidence and due dates.
Trigger	Condition that changes risk state.
Review	Next review date and decision history.

Risk scores are management indicators only. The UI must clearly avoid presenting them as legal conclusions or guaranteed outcomes.

27. Work-Blocking Legal Readiness Gates

27.1 Gate triggers

- Building permit missing or expired
- Permit suspended/revoked
- Required authority inspection failed
- Company or professional licence expired
- Environmental authorization missing
- Court injunction or stop order active
- Planning condition not discharged
- Utility authorization missing
- Occupancy prohibited

27.2 Gate payload

Field	Purpose
Gate state	Ready, Ready with Conditions, Restricted, Blocked, Unknown.
Scope	Project, site, building, zone, work package, activity or asset.
Reason codes	Structured, searchable reasons.
Source records	Permit, notice, case, requirement or inspection.
Effective period	Start, expiry and review date.
Release conditions	Required evidence or authority action.
Override metadata	Actor, authority, reason, evidence and expiry.

27.3 Enforcement

- Government & Legal publishes the gate state.
- Projects and Work Progress enforce blocking according to Platform Configuration.
- No silent override is permitted.
- An override must be time-limited, permission-controlled, evidence-backed and fully audited.

28. Documents, Retention and Legal Hold

28.1 Document structure

Government & Legal

- /01 Corporate Records
- /02 Regulatory Requirements
- /03 Permits and Licences
- /04 Applications and Submissions
- /05 Authority Correspondence
- /06 Regulatory Inspections
- /07 Legal Notices and Orders
- /08 Claims and Disputes
- /09 Court Cases
- /10 Fines and Penalties
- /11 Appeals
- /12 Insurance and Guarantees
- /13 Property and Land
- /14 Utility Authorizations
- /15 Legal Opinions
- /16 Powers of Attorney
- /17 Compliance Reports

28.2 Controlled document features

- Document Passport
- Revision and issue state
- Required reading and read receipt
- Expiry, watermark and retention
- Dependencies and impact warnings
- Confidentiality and legal hold

28.3 Legal hold

Rule	Requirement
Scope	May target companies, projects, users, date ranges, record types and documents.
Deletion	Permanently blocked while hold is active.
Archive	Records remain searchable and linked.
Retention	Normal disposal is paused or recalculated according to configuration.
Release	Requires authorized action, reason and audit history.
Enforcement	Documents enforces file-level hold; source modules enforce record-level hold.

29. Tasks, Calendar, Finance and Cross-Module Integrations

29.1 Tasks

- Prepare application
- Obtain missing document
- Respond to authority
- Attend inspection
- Correct violation
- Prepare/file appeal
- Renew permit
- Brief counsel
- Complete compliance report

The legal record owns the obligation. Tasks owns execution. Task completion does not automatically verify compliance.

29.2 Calendar

- Permit/licence expiry and renewal
- Submission and authority-response deadlines
- Inspection, hearing and filing dates
- Appeal, fine-payment and obligation deadlines
- Insurance, legal-hold and power-of-attorney reviews

29.3 Finance

- Permit/application/court fees
- Legal counsel costs
- Fines and penalty interest
- Settlement amounts and insurance recoveries
- Legal provisions, guarantees and refunds

29.4 Other integrations

Module	Integration
Projects	Project legal status and readiness gates.
Work Progress	Scope-specific blocks and release conditions.
Contracts	Contractual notices, claims and guarantees.
HSE	Formal regulator notifications and proceedings.
QA/QC	Statutory inspection and completion outcomes.
Assets	Asset permits, registrations and legal restrictions.
CRM	Client/company contacts and dispute relationships.
Units	Occupancy/use authorization and property links.

30. Search, Filters and Saved Views

30.1 Global search

- Search by code, external reference, title, authority, company, project, party, parcel, court number and document metadata.
- Results must respect tenant, company, project, matter and confidentiality permissions.
- Search snippets must not leak privileged text from inaccessible records.
- Archived and superseded records are excluded by default but available through explicit filters.

30.2 Standard filters

- Record type and status
- Company, project, jurisdiction and authority
- Owner and responsible team
- Due/expiry date range
- Work-blocking state
- Confidentiality
- Linked case/permit/requirement
- Archived, superseded and legal-hold state

30.3 Saved views

Saved views may be private or shared where authorized. Shared views store filter definitions, columns and sorting but never bypass the viewer's permissions.

31. Notifications and Approval Readiness

31.1 Domain events

- Permit Expiring/Expired/Suspended
- Submission Deadline Approaching
- Authority Response Received
- Additional Information Requested
- Inspection Scheduled/Failed
- Legal Notice Received
- Appeal Deadline Approaching
- Fine Overdue
- Hearing Scheduled
- Court Decision Received
- Compliance Obligation Overdue
- Insurance Expiring
- Legal Hold Issued
- Work Legally Blocked

31.2 Notification boundary

This module emits notification-ready events. The future Notifications Module determines in-app, email, digest and escalation delivery.

31.3 Approval hooks

- Decision point ID
- Eligible decision roles
- Required evidence
- Threshold or rule
- Approval reference ID
- Escalation hook
- Override permission and expiry

No generic approval workflow designer is implemented in this module.

32. Data Model

32.1 Core entities

```
RegulatoryFramework, Jurisdiction, RegulatoryRequirement
Authority, AuthorityDepartment, AuthorityContact
Permit, PermitType, PermitCondition, PermitAmendment
Licence, LicenceType, Application, Submission, SubmissionPackage, SubmissionReceipt
OfficialCorrespondence, RegulatoryInspection, InspectionFinding
ComplianceObligation, ComplianceEvidence
LegalNotice, AdministrativeOrder, Claim, Dispute
LegalCase, LegalCaseParty, LegalCaseDeadline, LegalCaseHearing, LegalSubmission, CourtDecision
Appeal, Fine, Penalty, Sanction
InsurancePolicyLink, InsuranceClaimLink, GuaranteeLink
PropertyLegalRecord, Parcel, TitleRecord, Encumbrance, Easement, UtilityAuthorization
CorporateComplianceRecord, LegalOpinion, PowerOfAttorney, LegalRisk, LegalHold
LegalDocumentLink, LegalCostReference, LegalActivity, LegalMetricSnapshot
```

32.2 Universal fields

- id (UUID)
- tenant_id
- legal_company_id

- project_id where applicable
- business_code
- jurisdiction_id
- status
- confidentiality_level
- created_by / created_at
- updated_at
- record_version
- archive_state
- audit_correlation_id

32.3 Key constraints

- Business codes unique within configured scope.
- External reference uniqueness configurable by authority and record type.
- Verified legal deadlines cannot be edited without correction history.
- Issued/submitted manifests are immutable.
- Legal hold blocks hard deletion.
- Cross-tenant and unauthorized cross-company references are rejected.

33. Backend and Event Architecture

33.1 Domain services

- Regulatory Requirements Service
- Jurisdiction Service
- Authority Registry Service
- Permit and Licence Service
- Application and Submission Package Service
- Correspondence Service
- Regulatory Inspection Service
- Compliance Obligation Service
- Legal Notice Service
- Dispute and Case Service
- Deadline Calculation Service
- Fine and Appeal Service
- Property Legal Service
- Corporate Compliance Service
- Legal Hold Service
- Legal Risk Service
- Work-Blocking Gate Service
- Legal Metrics Service

33.2 Integration adapters

- Documents Adapter
- Tasks Adapter
- Calendar Adapter
- Finance Adapter
- Contracts Adapter
- HSE Adapter
- QA/QC Adapter
- Projects/Work Progress Adapter
- Assets Adapter

33.3 Event pattern

- Transactional outbox
- Idempotent consumers
- Correlation and causation IDs
- Tenant/company/project scope in every event

- Actor identity and source version
- Retry queues and dead-letter handling
- Optimistic concurrency for aggregate writes

```

PermitExpired
-> Legal Compliance Gate Service
-> Recalculate affected project legality
-> Emit ProjectLegalReadinessChanged
-> Projects / Work Progress update operational gate

```

33.4 Event contracts

Event	Minimum payload
PermitStatusChanged	permit_id, previous_status, new_status, effective_at, scope, source_version
ComplianceObligationOverdue	obligation_id, occurrence_id, due_at, owner_id, severity
LegalNoticeReceived	notice_id, company_id, project_id, response_deadline, confidentiality
ProjectLegalReadinessChanged	project_id, scope, gate_state, reason_codes, effective_at
LegalHoldIssued	hold_id, scope_types, record_ids, start_at, custodian_id

34. API Contract

34.1 General conventions

- REST/JSON initial contract
- Bearer authentication and tenant context
- Idempotency-Key required for writes
- If-Match or record_version required for updates
- Cursor pagination for large lists
- RFC 7807-style error payloads
- Field-level redaction according to permissions

34.2 Representative endpoints

```

GET    /legal/requirements
POST   /legal/requirements
GET    /legal/authorities
POST   /legal/permits
GET    /legal/permits/{id}
POST   /legal/permits/{id}/activate
POST   /legal/permits/{id}/suspend
POST   /legal/permits/{id}/renew
POST   /legal/permits/{id}/amendments
POST   /legal/applications
POST   /legal/applications/{id}/submit
POST   /legal/regulatory-inspections
POST   /legal/obligations/{id}/submit-evidence
POST   /legal/obligations/{id}/verify
POST   /legal/notices
POST   /legal/cases
POST   /legal/cases/{id}/deadlines
POST   /legal/appeals/{id}/file
POST   /legal/fines/{id}/link-payment
POST   /legal/holds
POST   /legal/holds/{id}/release

```

34.3 Error codes

Code	Meaning
LEGAL_VERSION_CONFLICT	Record changed since client version.
LEGAL_HOLD_ACTIVE	Operation blocked by active legal hold.
LEGAL_DEADLINE_VERIFIED	Direct edit blocked; correction flow required.
LEGAL_SCOPE_FORBIDDEN	Cross-company/project scope not authorized.
LEGAL_DOCUMENT_VERSION_INVALID	Required submitted document revision is unavailable.
LEGAL_SIGNATORY_INVALID	Power of attorney or signatory authority is insufficient.
LEGAL_GATE_OVERRIDE_REQUIRED	Requested operation conflicts with legal readiness gate.

35. Frontend Architecture

35.1 Application structure

- Feature-based module boundaries
- Route-level data loaders and permission guards
- Shared record header, status rail, timeline, linked-record drawer and document picker
- Query caching with tenant-aware keys
- Optimistic updates only for low-risk draft operations
- Server-confirmed transitions for issued/submitted/verified records

35.2 Core components

Component	Purpose
LegalRecordHeader	Code, status, owner, confidentiality, primary dates and actions.
LegalTimeline	Immutable lifecycle and correction history.
DeadlinePanel	Source, calculation, verification and calendar state.
PermitConditionTable	Condition status, owner, due date and evidence.
SubmissionManifest	Immutable document/version list and receipt details.
LegalReadinessBanner	Project scope gate and blocking reasons.
MatterAccessPanel	Matter team, external counsel and confidentiality.
LinkedRecordDrawer	Context links without permission escalation.

35.3 State management

- URL state for filters, sorting, selected tabs and deep links.
- Local draft state for unsaved forms.
- Server state for records, permissions and activity timelines.
- Background refresh for deadlines, status and Finance/Calendar projections.
- Explicit conflict UI on version mismatch; never silently overwrite.

36. Security, Privacy and Confidentiality

36.1 Mandatory rules

- Project access does not automatically grant case or legal-opinion access.

- Document access does not expand source-record permission and vice versa.
- External counsel receives only explicitly selected matters and documents.
- Privileged markers persist on export, print and document generation.
- Sensitive reads may be audit-logged according to configuration.
- All searches and aggregates apply row- and field-level authorization before returning content.

36.2 Data protection

- Data minimization
- Configurable retention
- Legal hold override
- Export watermarking
- Confidentiality labels
- Access review
- Session and device audit hooks
- Encryption in transit and at rest

36.3 Threat cases

Threat	Mitigation
Privilege leakage through search	Permission-filtered index and snippet generation.
Cross-company data access	Tenant/company scope enforced in repository layer.
Unauthorized deadline change	Verified-date correction flow and audit.
Document substitution after filing	Immutable submission manifest and version hash.
Silent legal-gate override	Dedicated override capability, reason, evidence and expiry.
Export of confidential matter	Watermark, capability check and export audit.

37. Responsive and Offline UX

37.1 Desktop

- Dense register tables with configurable columns
- Split list/detail layouts
- Timeline and linked-record drawers
- Side-by-side deadline and evidence views
- Multi-record bulk operations for safe status or ownership changes

37.2 Tablet

- Adaptive two-column layouts
- Collapsible record sections
- Touch-friendly status rail and document capture
- Horizontal timeline and deadline views

37.3 Mobile

- Permit and legal-readiness summary
- Capture correspondence/notice/inspection evidence
- Scan permit/record QR code
- Record hearing/inspection outcome
- Upload delivery receipt and evidence
- View critical deadlines and legal holds

37.4 Offline

Allowed offline drafts	Not finalized offline
Inspection notes	Permit activation or suspension
Correspondence registration	Formal submission confirmation
Notice registration	Legal-hold release
Document/photo capture	Appeal filing
Hearing notes	Fine or case closure
Compliance evidence draft	Compliance verification or gate override

38. Premium Motion and Accessibility

38.1 Premium interaction rules

- Subtle permit-status rail transitions
- Deadline countdown indicators
- Case procedural timeline animation
- Compliance heat-map transitions
- Contextual side panels and skeleton loading
- Reduced-motion preference support

38.2 Accessibility

- WCAG 2.2 AA target.
- Critical states never rely on color alone.
- Keyboard navigation for tables, filters and timelines.
- Screen-reader labels for confidentiality, status and deadline severity.
- Visible focus indicators and sufficient contrast.
- Accessible error summaries and field-level messages.

39. Reporting and Analytics

39.1 Operational reports

- Permit and licence registers
- Permit-expiry and application-status reports
- Authority-response and regulatory-inspection reports
- Compliance-obligation and legal-notice reports
- Fines, active cases, appeals and insurance compliance
- Property/title and corporate-compliance reports
- Project legal-readiness report

39.2 Executive analytics

- Legal exposure by company/project
- Cases by stage and jurisdiction
- Fines by authority
- Permit delay and authority-response trends
- Compliance closure rate and repeated findings
- Legal cost trends and regulation-related project delays
- Insurance and authorization gaps

39.3 Metric rules

- Every metric must expose its source records.
- Estimated exposure is clearly separated from Finance postings.
- Descriptive response-time analytics must not be presented as guaranteed forecasts.
- Archived/superseded records are included only according to report definition.

40. Platform Configuration

Configuration area	Examples
Jurisdiction	Countries, regions, business-day calendars and holidays.
Authorities	Types, departments, submission channels and accepted formats.
Record types	Permit, licence, submission, inspection, notice, case and fine types.
Status models	Allowed transitions and terminal states.
Deadline rules	Calculation method, verification, grace periods and escalation hooks.
Confidentiality	Levels, read-audit, export and field restrictions.
Numbering	Prefixes and sequences by company/project/type.
Evidence	Required document classes, issue states and expiry rules.
Legal readiness	Blocking conditions, scope rules and override capabilities.
Retention	Retention schedules and legal-hold behavior.
UI	Enable/disable page, section, field, report and action.

41. Validation, Errors and Concurrency

41.1 Validation categories

- Required field and format validation
- Jurisdiction/type applicability
- Date ordering and deadline rules
- Status transition guards
- Permission and confidentiality checks
- Document version and issue-state checks
- Signatory/authority validation
- Duplicate and external-reference checks
- Legal-hold and gate enforcement

41.2 Concurrency scenarios

- Two users editing the same permit condition.
- Authority response recorded while application is being resubmitted.
- Finance payment linked while a fine is appealed.
- Legal hold issued while deletion is in progress.
- Case deadline corrected while calendar projection is refreshing.
- Project legal readiness changes while Work Progress submits activity.

41.3 Conflict behavior

High-risk writes use optimistic concurrency and fail with a clear conflict payload. The client shows the current server version, the user draft and allowed resolution actions. Silent last-write-wins is prohibited for verified, issued, submitted, privileged or legal-hold records.

42. Non-Functional Requirements

Area	Requirement
Availability	Core read operations target 99.9% monthly availability excluding planned maintenance.
Performance	P95 list/query response under 800 ms for standard filtered views; detail under 600 ms excluding document preview.
Scale	Support at least 10,000 active permits, 100,000 obligations and 1,000,000 activity events per tenant.
Audit	All lifecycle, permission-sensitive and override actions produce immutable audit events.
Security	Encryption in transit/at rest, tenant isolation and least privilege.
Accessibility	WCAG 2.2 AA target for supported web flows.
Localization	Time zones, date formats, currencies and jurisdiction calendars.
Resilience	Idempotent events, retries, dead-letter queues and recoverable projections.
Retention	Configurable retention with legal-hold override.
Export	Large exports asynchronous with permission snapshot and audit.

43. Observability and Audit

43.1 Audit events

- Create/update/archive/restore
- Status transition
- Deadline verification/correction
- Submission manifest creation
- Permit activation/suspension
- Legal gate change/override
- Confidentiality or access change
- Legal hold issue/release
- Export/print of privileged records
- Failed authorization and suspicious access

43.2 Operational telemetry

- API latency/error rate
- Event backlog and dead-letter count
- Projection freshness
- Search indexing delay
- Calendar/Finance adapter failures
- Permission-denial anomalies
- Large export duration
- Legal-readiness propagation latency

43.3 Audit data

Field	Required value
Actor	User/service identity and role snapshot.
Scope	Tenant, company, project and matter.

Field	Required value
Action	Business action and technical endpoint.
Before/after	Relevant structured values or redacted diff.
Reason	Required for override, correction and exceptional transitions.
Correlation	Request, event and background-job identifiers.
Timestamp	UTC plus source timezone where relevant.

44. QA Strategy and Test Matrix

44.1 Test layers

- Unit tests for lifecycle and calculation rules
- Integration tests for Documents, Tasks, Calendar, Finance and gate propagation
- Contract tests for APIs and domain events
- End-to-end tests for critical legal flows
- Security and confidentiality tests
- Performance and search-volume tests
- Responsive, accessibility and offline synchronization tests

44.2 Critical scenarios

Scenario	Expected result
Permit expires during active work	Legal gate changes and affected work is blocked/configured appropriately.
Permit addendum changes one building only	Only affected scope recalculates.
Authority requests additional information after deadline	Application status updates without erasing original timeline.
Verified court deadline edited	Direct edit blocked; correction flow required.
Fine paid while appeal remains open	Finance state updates; legal appeal state remains open.
Project access removed but user remains on case team	Case access follows matter scope, not project inheritance.
Legal hold issued after deletion request	Deletion is blocked and event audited.
Technical drawing revised after permit issue	Impact warning appears; permit record remains unchanged.
External counsel access removed	Future access denied; historical audit preserved.

44.3 Minimum automation coverage

- All lifecycle transitions
- All legal-hold rules
- All critical permission paths
- Deadline calculations and business-day calendars
- Idempotent submission/appeal operations
- Work-blocking gate publication
- Immutable manifests and original amounts

45. Acceptance Criteria

AC-01 Users can register configurable regulatory requirements and apply them to companies, projects and operational scope.

AC-02 Permits and licences support complete lifecycle, conditions, renewal, suspension, revocation, amendment and history.

AC-03 Submitted packages store immutable document/version manifests and delivery evidence.

AC-04 Authority correspondence, inspections, notices and decisions are structured, searchable and linked to source documents.

AC-05 Compliance obligations support recurrence, evidence, verification and overdue state without equating Task completion to compliance.

AC-06 Court cases support parties, deadlines, hearings, submissions, decisions, appeals, costs and privileged access.

AC-07 Fines link to Finance payment state while preserving independent legal and appeal status.

AC-08 Legal holds prevent deletion across source records and documents and are fully auditable.

AC-09 Project legal-readiness gates are published by scope and contain source-linked reasons.

AC-10 Cross-module integrations preserve source-of-truth boundaries.

AC-11 Project access does not automatically expose privileged matters.

AC-12 Every important action appears in immutable audit history.

AC-13 All major pages support desktop, tablet and mobile layouts.

AC-14 Platform Configuration can enable/disable types, sections, fields, workflows, reports and actions.

AC-15 Initial release operates without mandatory third-party integrations.

46. Delivery Phases and Migration

46.1 Phase 1 - Regulatory foundation

- Dashboard
- Project legal workspace
- Requirements and authorities
- Permits, licences, applications and submissions
- Correspondence and regulatory inspections
- Compliance obligations and fines
- Documents, Calendar, Tasks and audit integration
- Responsive UI and core reporting

46.2 Phase 2 - Legal operations

- Notices and orders
- Claims and disputes
- Court cases and appeals
- Legal opinions and powers of attorney
- Legal risks, insurance compliance and legal costs
- Work-blocking gates

46.3 Phase 3 - Advanced governance

- Property and land
- Corporate compliance
- Utility authorizations
- Legal holds
- External counsel workspace
- Advanced analytics
- Offline support
- Consolidated group reporting

46.4 Migration

- Import master lists for authorities, permit types, jurisdictions and companies first.
- Import active records before closed historical records.
- Require mapping for external references, ownership, status and source documents.
- Migrate files through Documents and link by Document ID.
- Mark imported deadlines as Unverified until reviewed.
- Generate migration audit and reconciliation reports.

47. Risks and Open Decisions

Topic	Risk / decision required
Jurisdiction rules	Decide which deadline rules are configurable in v1 versus manual verification only.
Permissions	Finalize capability matrix after all operational modules are complete.
Legal privilege	Confirm export, read-audit and external-counsel policies.
Work blocking	Define which legal gate states hard-block versus warn in each business configuration.
Retention	Define default schedules by record type and jurisdiction.
Data residency	Determine whether certain tenants require regional hosting.
Government integrations	Remain roadmap; identify first target portals only after core model stabilizes.
AI features	Do not introduce until governance, privilege and source-citation controls are defined.

48. Page and Flow Registry

48.1 Page registry

Page	Primary purpose
Legal Dashboard	Executive risk, deadlines and readiness.
Government & Legal Register	Unified searchable register.
Project Legal Page	Project-specific regulatory workspace.
Permit / Licence Page	Authorization lifecycle and conditions.
Application / Submission Page	Package preparation, filing and response.
Authority Page	Authority reference and interaction history.
Correspondence Page	Official incoming/outgoing record.
Regulatory Inspection Page	Official authority inspection outcome.
Obligation Page	Evidence and verification lifecycle.
Notice Page	Administrative/legal notice and response.
Case Page	Court/administrative matter workspace.
Fine Page	Penalty legal and payment status.
Appeal Page	Appeal assessment, filing and outcome.
Legal Hold Page	Scope, enforcement and release.
Settings	Jurisdictions, types, status, deadlines and configuration.

48.2 Critical flows

43. Identify requirement -> prepare application -> submit package -> record receipt -> authority review -> decision -> active permit.
44. Permit condition due -> create Task -> submit evidence -> verify -> condition compliant.

- 45. Regulatory inspection -> finding -> obligation -> corrective Task -> evidence -> verification -> reinspection.
- 46. Notice received -> assess -> respond or appeal -> record authority/court outcome -> close.
- 47. Case created -> deadlines/hearings/submissions -> judgment -> appeal/enforcement -> close.
- 48. Legal hold issued -> source/document deletion blocked -> periodic review -> authorized release.
- 49. Permit expired/suspended -> legal gate recalculated -> Projects/Work Progress enforce scope-specific block.

END OF PRODUCT REQUIREMENTS DOCUMENT

ConstructionOS - Government, Legal & Compliance Module - Version 1.0
