

PRD_Rework_1

Projects Module and Project Page Redesign

Prepared for Full Stack Product, Design and Engineering Team

This PRD defines the redesigned Projects Module and the first complete version of the Project Page as a premium central control hub. It reflects the confirmed design direction from the brainstorming session and intentionally leaves certain linked workspaces for later PRDs.

Design principle: keep the Projects overview extremely clean and premium, and make the Project Page the main operational hub that links to dedicated sub-pages for deeper work.

Status: Confirmed scope for current rework round
Document type: Product Requirements Document

1. Document Control

Field	Value
Document name	PRD_Rework_1 — Projects Module and Project Page Redesign
Scope	Projects Module overview and Project Page hub design
Audience	Product Manager, UI/UX Designer, Full Stack Team, QA
Out of scope for this PRD	Detailed PRDs for Units Page, Task Page, Work Progress Page, Approval Page, Government & Legal Page, Team Page, Meetings Page, Photo Progress Page and detailed permission matrix

2. Executive Summary

The Projects Module must not be a crowded dashboard. It must be a premium Project Explorer that shows company and group projects as elegant cards. Clicking a card opens the full Project Page.

The Project Page is the real operational center. It presents high-value project information in a premium, compact and scalable way while linking to deeper specialized workspaces.

- Projects overview remains intentionally simple.
- Each project has a strong visual identity through a Project Brand Kit.
- The Project Page provides a clean central hub with direct access to the most important project sections.
- Every complex subsection can open its own dedicated page later.
- Desktop and mobile views must both feel premium, light and fast.

3. Projects Module — Overview Page

The Projects Module overview page shows only the company's or group's projects as premium cards.

Each card includes only lightweight information:

- Project cover image / pinned thumbnail
- Project name
- Location
- Owning company inside the group
- Status badge
- Progress percentage

Every user can pin favorite projects. Pinned project cards appear at the top for that user only.

PROJ-001 - The Projects overview page must not contain heavy dashboard blocks, large tables or dense operational widgets.

PROJ-002 - Project cards must support smooth premium hover animation with subtle lift, soft shadow and clean transitions.

PROJ-003 - Pinned projects must be saved per user and ordered independently from other users.

PROJ-004 - Clicking a project card must open the Project Page.

4. Project Brand Kit and Visual Identity

Each project has a consistent visual identity used across the entire platform.

- Pinned Thumbnail (primary project identity)
- Cover Image
- Accent Color
- Project Logo (optional)
- Project Short Code
- Project Icon (optional)

The pinned thumbnail is used across project cards, search, tasks, notifications, reports, favorites, calendars and all other places where project identity must be recognized instantly.

PROJ-005 - The pinned render selected in the render gallery becomes the project profile image and is reused across the platform.

PROJ-006 - Changing the pinned thumbnail must update all standard project identity locations.

5. Project Page — Purpose and Position

The Project Page is the central hub for a single project. It must feel premium, compact and operationally powerful.

It should not try to fully replace every specialized page. Instead, it should provide the most relevant summaries and entry points to deeper workspaces.

Confirmed Project Page scope:

- Project Header
- Open 3D Project action
- Units
- Tasks
- In-Progress Works
- Approvals
- Government & Legal
- Technical Documents
- Finance Dashboard
- Team
- Meetings
- Photo Progress

6. Project Header

The top of the page presents the project identity clearly and elegantly.

- Project name
- Project short code
- Location
- Owning group company / company
- Status badge
- Progress indicator

- Pinned favorite action
- Project cover image placed on the right side
- Open 3D Project primary action

Clicking the project cover image opens the render gallery. The pinned render chosen there becomes the Project Page cover image and the main project thumbnail across the platform.

PROJ-007 - The Project Header must support both desktop and mobile layouts without losing the premium feel.

PROJ-008 - The cover image must be sourced from the project's render gallery.

7. Open 3D Project

Every eligible project has a prominent Open 3D Project action in the Project Header.

- Navigate buildings and floors
- View units for sale
- Search by unit number
- Filter unit status: Available, Reserved, Sold, Coming Soon
- Use color-coded unit status
- Open the Unit Profile from the 3D viewer
- Support sales workflows such as unit reservation later

PROJ-009 - The 3D project viewer must be accessible directly from the Project Header.

PROJ-010 - The 3D viewer acts as a primary sales-support feature for unitized projects.

8. Project Page Sections

Units

First-class section inside every Project. Later opens a dedicated Unit Page / Units workspace.

Tasks

Compact list view of project tasks. Clicking a task opens the full Task Page later.

In-Progress Works

List of active work packages such as façade, flooring, plumbing and other construction works.

Approvals

Project-specific approval requests, decisions and approval flows.

Government & Legal

Dedicated access point to permits, licenses, addenda, correspondence, fines and related official documents.

Technical Documents

Project document library for floor plans, façades, sections, details, structural, MEP and related technical files.

Finance Dashboard

Embedded project financial summary accessible directly inside the project.

Team

Everyone involved in the project: employees, contractors, consultants and client representatives.

Meetings

Project meetings with agenda, minutes, decisions, action items and attachments.

Photo Progress

Chronological visual progress gallery for site photos and videos.

9. Technical Documents

Every project includes a dedicated controlled technical document library.

- Facades
- Floor Plans
- Sections
- Details
- Structural
- MEP
- Interior
- Landscape
- Permits
- Other configurable folders

Every uploaded revision must be preserved with revision number, mandatory change comment, uploader details, timestamp, approval status and relationship to the previous revision.

PROJ-011 - Technical drawing revisions must never overwrite previous revisions.

PROJ-012 - The latest approved revision must be clearly identifiable.

10. Government & Legal

Official project-state documents are managed separately from technical drawings.

- Building Permit
- Permit Addendum #1, #2, ...
- Construction License
- Government correspondence
- Inspection reports
- Legal notices
- Appeals
- Fines / penalties
- Occupancy permit
- Completion certificate

This section later opens a dedicated Government & Legal page. For now, the Project Page must include an entry point and high-level status awareness.

11. In-Progress Works

In-Progress Works is not the same as Tasks. It shows actual construction work packages currently being executed.

- Work name
- Current status
- Progress percentage
- Area / building / floor
- Contractor
- Start date
- Expected finish date
- Delay indicator
- Latest update
- Photos

Clicking a work item such as Façade will later open a dedicated Work Progress Page with contractors, documents, tasks, payments, updates and activity timeline.

12. Approvals

The Project Page includes a dedicated Approvals section for requests such as client changes, alternative materials or other project decisions.

- Title
- Description and reason
- Requester
- Department
- Related client / unit / document / work package / material
- Options proposed
- Cost impact
- Timeline impact
- Technical impact
- Attachments
- Required approver or approval chain
- Deadline
- Status

The detailed Approval Page module will be designed later.

13. Finance Dashboard

Each Project contains its own embedded Finance Dashboard.

- Budget
- Approved contract values
- Committed costs
- Invoices
- Payments

- Receivables
- Payables
- Remaining balance
- Payroll allocation
- Cash flow
- Planned vs actual cost
- Forecasts
- Financial warnings

Values remain owned by the central Finance module but are accessible directly from inside the project to authorized users.

14. Team, Meetings and Photo Progress

Team lists everyone involved in the project including employees, contractors, consultants and client representatives.

Meetings provide project meeting tracking with agenda, minutes, attendees, decisions, action items and attachments.

Photo Progress provides chronological project progress documentation using photos and videos.

15. UX and Design Direction

- Premium minimal design
- Compact cards and information blocks
- Avoid huge heavy boxes
- Strong hierarchy and whitespace
- Smooth transitions and hover states
- Fast scanning on desktop and mobile
- Project identity shown clearly
- Simple entry points into deeper workspaces

The Project Page should feel like a premium control center, not a cluttered ERP dashboard.

16. Reference Designs

Desktop Project Page Reference

Figure 1. Desktop Project Page premium redesign reference.

Mobile Project Page Reference

Figure 2. Mobile Project Page premium redesign reference.

17. Acceptance Criteria

- AC-01 - Projects overview shows premium project cards only, without heavy embedded dashboards.
- AC-02 - Users can pin favorite projects and see them first.
- AC-03 - Each project has a reusable visual identity through the Project Brand Kit.
- AC-04 - Project Header displays name, status, progress, company, location and right-side cover image.
- AC-05 - Clicking the cover image opens the render gallery.
- AC-06 - The pinned render becomes the universal project thumbnail.
- AC-07 - The Project Page includes all confirmed main sections.
- AC-08 - Open 3D Project is present and accessible from the header.
- AC-09 - Technical Documents and Government & Legal are separated.
- AC-10 - Tasks and In-Progress Works remain separate concepts.
- AC-11 - Desktop and mobile layouts both reflect the premium reference direction.

18. Future Detailed PRDs

- Units / Unit Page
- Tasks Module
- Work Progress Page
- Approvals Module
- Government & Legal Module
- Meetings Module
- Team Page
- Photo Progress Page
- Permissions matrix by user type
