

CONSTRUCTION OS

PRD_13

Contractor and Client
Contract Financial Tracking

Finance-controlled contract values, detailed payments, outstanding balances and consolidated exposure

Version	1.0
Date	3 August 2026
Status	Confirmed Scope - Full-Stack Implementation Specification
Audience	Senior Full-Stack Engineering, Product, QA, DevOps, Security and Data Teams

Compatibility rule

This PRD extends the Construction OS master product requirements and all earlier PRDs. Earlier requirements remain authoritative unless this document explicitly amends them.

- 16 Deferred Decisions

1. Executive Purpose

PRD_13 defines the financial summary shown on contractor profiles and applies the same controlled structure to clients who have contracts with the company. The objective is to show, per contract and in consolidated lifetime totals, how much value the company has contracted, how much has been paid or received, and how much remains payable or receivable.

Finance is the authoritative input owner

All displayed contract summary values are entered and approved manually by the Finance department. The system calculates comparison values and warnings but does not silently replace Finance-entered figures.

2. Scope and Financial Direction

Profile type	Financial direction	Per-contract values	Consolidated values
Contractor	Company payable	Approved contract value; amount paid by company; amount still payable.	Total approved contracted value; total paid; total outstanding payable.
Client	Company receivable	Approved contract value; amount received from client; amount still receivable.	Total approved contracted value; total received; total outstanding receivable.

This PRD provides operational contract exposure and payment tracking. It does not by itself replace the company accounting ledger, statutory bookkeeping or bank reconciliation system.

3. Contractor Profile Requirements

Contract row field	Requirement
Contract	Contract number/title must be clickable and open the full contract record subject to permission.
Project	Show the related project when applicable and permit navigation according to project access.

Contract row field	Requirement
Approved contract value	Manual Finance-approved value.
Amount paid	Manual Finance-approved cumulative amount, supported by detailed payment records.
Amount left to pay	Manual Finance-approved outstanding payable amount.
Reconciliation status	Balanced or warning state based on comparison with payment records and arithmetic.
Last Finance update	Date/time and responsible Finance user.

At the end of the contractor profile, the platform must display consolidated totals across all contracts between the company and that contractor.

4. Client Profile Extension

The same contract-financial structure must be available for every client who has a contract with the company. This extends the Client Page defined in PRD_12.

Client contract field	Requirement
Contract	Clickable link to the full client contract subject to permission.
Purchased unit/project	Link to related purchased unit and project.
Approved contract value	Manual Finance-approved receivable value.
Amount received	Manual Finance-approved cumulative amount, supported by detailed client payment records.
Amount left to receive	Manual Finance-approved outstanding receivable amount.
Schedules/invoices	Continue to display relevant schedules and invoices from PRD_12 without automatically overwriting manual summary values.
Reconciliation status	Balanced or warning state.

The end of the Client Page must show consolidated totals across all contracts for that client: total approved value, total received and total remaining receivable.

5. Finance Data Entry and Approval

- Only authorized Finance users may create or change official contract summary values.
- Finance manually enters approved contract value, paid/received amount and remaining payable/receivable amount.
- The platform must record the responsible Finance user, date/time and prior values for every change.
- Values remain in draft until the Finance user performs the configured save/approval action.
- The system may display calculated comparisons but must not overwrite the official manual values automatically.
- Corrections create a new version/audit entry rather than erasing prior financial history.

CF-FIN-001 Manual source of truth

The official profile cards and totals use the latest Finance-approved manual values, even when a reconciliation warning exists.

6. Detailed Payment Records

Every contractor payment and every client payment must be stored as an individual payment record. A cumulative value alone is not sufficient.

Payment field	Required behavior
Direction	Contractor payment or client receipt.
Contract	Mandatory clickable relationship to the relevant contract.

Payment field	Required behavior
Counterparty	Contractor or client.
Payment date	Required.
Amount and currency	Required; currency must follow contract/company currency controls.
Reference	Bank/reference number or internal payment reference.
Payment method	Configurable method such as bank transfer, cash, card or other approved method.
Proof document	Supporting receipt, bank proof, invoice settlement evidence or other file.
Finance status	Draft, confirmed, corrected/reversed or other controlled status.
Allocation	Link to the applicable contract and, for clients, selected invoice/installment/unit allocation where used.

CF-PAY-001 Proof and traceability

A confirmed payment record must retain its proof document and audit history. Reversal/correction must not destroy the original entry.

7. Reconciliation and Warning Logic

Because Finance enters all three summary values manually, the platform must compare them with arithmetic and detailed payment records and show warnings when they do not reconcile.

Check	Expected comparison	System behavior
Summary arithmetic	Approved value - manual paid/received = manual remaining.	Show warning when the values do not match.
Payment-record total	Sum of confirmed payment records = manual paid/received.	Show warning when totals differ.
Negative remaining	Manual remaining is below zero.	Show warning; do not silently change value.
Payment exceeds value	Confirmed payment total exceeds approved value.	Show warning and retain all entries for Finance review.
Currency mismatch	Payment currency differs from contract summary currency.	Require exchange-rate handling or mark as unresolved; do not add incompatible currencies directly.
Missing proof	Confirmed payment lacks required proof.	Block confirmation or show policy error according to existing Finance proof rules.

Warning, not automatic correction

The system must not overwrite Finance-entered approved value, paid/received amount or remaining amount. Warnings remain visible until Finance corrects or confirms the discrepancy under a future exception policy.

8. Consolidated Totals

Total	Contractor profile	Client profile
Total approved value	Sum of latest Finance-approved contract values across contractor contracts.	Sum of latest Finance-approved contract values across client contracts.
Total paid/received	Sum of latest Finance-approved paid amounts.	Sum of latest Finance-approved received amounts.
Total outstanding	Sum of latest Finance-approved remaining payable amounts.	Sum of latest Finance-approved remaining receivable amounts.
Detailed payment total	Sum of confirmed contractor payment records for comparison.	Sum of confirmed client payment records for comparison.

Total	Contractor profile	Client profile
Reconciliation indicator	Show count/value of contracts with warnings.	Show count/value of contracts with warnings.

CF-TOTAL-001 Currency-safe totals

Do not combine different currencies into one numeric total unless a company-approved reporting currency and exchange-rate method are configured. Otherwise group totals by currency.

CF-TOTAL-002 Archived contracts

Archived/completed contracts remain in lifetime totals unless Finance explicitly marks them excluded under a future approved policy. Deleted records must follow existing retention and audit rules.

9. Permissions and Visibility

Confirmed viewing roles

Contractor financial values are visible to Finance, Procurement, Legal, relevant Project Managers, Company Admin and Company Owner. Other internal users cannot see these amounts.

Role	Contractor financial visibility	Client financial visibility
Finance	Full view and edit/approval according to Finance permissions.	Full view and edit/approval according to Finance permissions.
Procurement	View contractor financial values relevant to procurement/contracts.	No automatic client receivable access unless separately permitted.
Legal	View relevant contract values and payment status where contract access applies.	View relevant contract values/payment status where Legal access applies.
Relevant Project Manager	View financial values for contractor contracts relevant to their project.	Client values only if separately granted under PRD_12/role permissions.
Company Admin / Owner	Complete access.	Complete access.
Other users	Amounts hidden.	Amounts hidden according to PRD_12 section permissions.

CF-ACL-001 Field-level security

Summary values, payment records, proof documents and totals must be filtered on the backend and excluded from unauthorized API responses, exports and search indexes.

10. Frontend Requirements

Component	Minimum behavior
Profile summary cards	Approved value, paid/received, outstanding and reconciliation warning count.
Contract table	Clickable contract, project/unit where relevant, three manual Finance values, warning indicator and last update.
Payment drawer/page	Individual payment records with date, amount, reference, method, proof and status.
Finance edit mode	Manual entry for the three official values and payment records with validation feedback.
Warning details	Explain which comparison failed and show manual value versus calculated/recorded value.
Consolidated footer/summary	Lifetime totals across all contracts, grouped by currency when necessary.
Permission state	Hide financial columns/cards entirely for unauthorized users rather than showing masked placeholders.

11. Backend and Data Model

Entity	Essential fields/relationships
ContractFinancialSummary	Tenant, counterparty type/ID, contract, currency, approved value, manual paid/received, manual remaining, status, Finance approver, version.
PaymentRecord	Tenant, direction, counterparty, contract, date, amount, currency, reference, method, proof document, status and creator/approver.
PaymentAllocation	Payment and target invoice/installment/contract/unit allocation; primarily used for client receivables under PRD_12.
FinancialReconciliation	Contract summary, check type, expected value, actual value, variance, warning status and last evaluated time.
CounterpartyFinancialAggregate	Materialized or calculated totals per contractor/client and currency, with source-version metadata.
FinancialAuditEvent	Actor, record, previous values, new values, reason/context, timestamp and source action.

CF-DATA-001 Versioned summaries

Each manual Finance update creates a version. The current profile uses the latest approved version; historical reports can identify the version effective at a past time.

CF-DATA-002 Tenant and counterparty integrity

A payment or summary may link only to contracts and counterparties belonging to the same company tenant.

12. Calculation and Validation Rules

Rule	Definition
Calculated remaining	Approved contract value minus manual paid/received amount. Used only for comparison.
Recorded payment total	Sum of confirmed, non-reversed payment records for that contract and currency.
Manual summary variance	Manual remaining minus calculated remaining.
Payment-record variance	Manual paid/received amount minus recorded payment total.
Consolidated totals	Sum latest approved manual summary values across included contracts, grouped by currency.
Re-evaluation trigger	Create/update/reverse payment; approve summary; change contract/currency; restore relevant record.

13. API Requirements

Endpoint capability	Requirement
Read contractor/client financial profile	Return contract rows and consolidated totals only to authorized roles.
Create/update financial summary	Finance-only; require optimistic locking/version and audit.
Create/confirm/reverse payment	Finance-only; require proof rules, contract relationship and idempotency.
Reconciliation service	Evaluate checks after every relevant event and return structured warning codes.
Aggregate service	Update totals reliably through transaction or event/outbox processing.
Document access	Proof documents use existing secure document permissions and audit.
Export	Apply the same role and field filters as the interactive page.

14. Audit and Security

- Audit every create, edit, approval, reversal, proof replacement, warning resolution and export.

- Do not permit deletion of confirmed payment history without the existing recycle/retention and audit controls.
- Require Finance authorization for official values and payment status changes.
- Use immutable references from payment records to proof documents and contracts.
- Protect financial values from unauthorized search, analytics, notifications and client-side caching.
- Record whether a value was manually entered, imported or calculated for comparison.
- Keep contractor payable and client receivable directions explicit to prevent sign confusion.

15. Acceptance Criteria

ID	Acceptance criterion
AC-13-01	A contractor profile shows each clickable contract with Finance-approved value, paid amount and remaining payable.
AC-13-02	The contractor profile shows lifetime totals across all contractor contracts.
AC-13-03	Each contractor payment is stored as a separate record with date, amount, reference, method and proof.
AC-13-04	Finance can enter all three official values manually; the system warns but does not overwrite them when they do not reconcile.
AC-13-05	The same structure is available on client profiles using received and receivable terminology.
AC-13-06	Client and contractor consolidated totals are generated from latest Finance-approved manual summaries.
AC-13-07	A mismatch between manual paid/received and detailed payment records creates a visible structured warning.
AC-13-08	Finance, Procurement, Legal, relevant Project Managers, Company Admin and Company Owner can see permitted contractor values; other users cannot retrieve them.
AC-13-09	Totals with multiple currencies are grouped by currency unless an approved conversion method exists.
AC-13-10	Every summary and payment change retains actor, time and previous values.

16. Deferred Decisions

- Client installment reminder and overdue escalation rules.
- Whether Finance may formally acknowledge an unresolved reconciliation variance without correcting it.
- Foreign-exchange rate source and reporting-currency conversion policy.
- Treatment of taxes, retention, advances, credit notes and contract variations in summary values.
- Approval hierarchy inside Finance for high-value changes or reversals.
- Whether relevant Project Managers should retain amount visibility after project completion or reassignment.
