Personal Calendar, Team Availability and Adaptive Role Themes

Construction OS

VERSION 1.0

STATUS **Draft - consolidated decisions**

DATE **03 August 2026**

This document records the decisions made during the PRD discussion. Unresolved items are clearly marked for later definition.

1. Document purpose

This PRD defines the agreed behavior for the Construction OS personal calendar, HR leave visibility, shared team availability, user-controlled reminders, external calendar synchronization, and adaptive interface themes.

Core product principle

Each user owns a private, unified working calendar. Shared availability reveals only the minimum information needed for coordination. Calendar visibility must not become a channel for exposing private HR information.

1.1 Scope

- A private personal calendar for every platform user.
- One combined view of agenda events, tasks, deadlines, meetings, approved leave, project milestones, inspections, and other relevant scheduled records.
- HR-controlled leave approval and limited availability sharing.
- A separate Team Availability view for approved colleague leave.
- User-defined reminder timing.
- Two-way synchronization with Google Calendar and Microsoft Outlook.
- Three selectable interface themes, including role-specific creative interfaces.

1.2 Non-goals in this version

- Automatic reassignment of tasks when an employee is on leave.
- Automatic deadline changes, workload balancing, or leave-related warnings.
- Company-wide exposure of employee leave information.
- Final definition of who appears in Team Availability.

1.3 Document control

Field	Value
Product	Construction OS
Document name	PRD_9
Version	1.0
Status	Draft - agreed decisions plus deferred items
Primary domains	Calendar, HR availability, notifications, themes, external integrations
Language	English

2. Decisions at a glance

Area	Agreed decision	Status
Personal calendar	Every user has a private calendar containing all of their relevant scheduled work in one view.	Approved
Calendar navigation	Items use category colors and are clickable links to their original records.	Approved
Calendar privacy	Only the owner may view their personal calendar.	Approved
Leave creation	Employee or direct superior may create a leave request. HR gives final approval.	Approved
Approved leave edits	Only HR may change or cancel an approved leave entry.	Approved
Shared leave detail	Authorized viewers see only dates and Unavailable status.	Approved
Leave impact on tasks	No warnings, notifications, reassignment, deadline change, or blocking.	Approved
Team availability	Connected colleague leave appears in a separate Team Availability view, not the personal calendar.	Approved
Team availability population	Exact people included in this view remain undefined.	Deferred
Reminders	Each user chooses their own reminder timing.	Approved
External sync	Two-way Google Calendar and Microsoft Outlook synchronization.	Approved
Theme choices	Platform Default, Night Mode, and Creative User Type Theme.	Approved
Multi-role theme	Creative theme changes automatically with the active role or department.	Approved
Creative interface depth	The active role may receive a substantially different interface and navigation.	Approved

Privacy boundary

A private calendar and shared availability are separate concepts. Other users must not gain access to calendar titles, descriptions, locations, attachments, task details, meeting notes, or private agenda items through availability features.

3. Personal calendar

3.1 Unified calendar experience

Every platform user receives a personal synchronized calendar. The calendar consolidates that user's relevant scheduled activity into one view rather than forcing the user to open each module separately.

Calendar item type	Displayed information	Click behavior
Personal agenda	Title, date/time, reminder state, category color	Open the agenda event.
Assigned task	Task title, due date/time, project context, task color	Open the original Task record.
Deadline	Deadline label, due date/time, linked record	Open the original source record.
Meeting	Meeting title, date/time, location or online indicator	Open the original Meeting record.
Approved leave	The user's own approved leave dates and status	Open the authorized Leave record.
Project milestone	Milestone name and date	Open the original Project or milestone record.
Inspection	Inspection title, date/time, project or site context	Open the original Inspection record.
Other scheduled record	Source-defined title, date/time, category	Open the original source module record.

3.2 Visual classification

- Different event categories use different colors so users can scan the calendar quickly.
- Color communicates event category, not record permission or approval authority.
- Every item remains linked to its original source of truth.

3.3 Privacy

Private by default

Only the calendar owner may view their personal calendar. Direct superiors, senior managers, HR, task collaborators, and project collaborators do not receive access to the user's calendar or its event details merely because of their relationship to the user.

3.4 Leave-related behavior

- Approved leave does not automatically alter tasks, meetings, deadlines, or assignments.
- Users may assign a new task or meeting during another employee's approved leave without a warning or block.
- Leave visibility is informational only in this PRD.

4. Leave workflow and availability

4.1 Leave request lifecycle

1. The employee or the employee's direct superior creates the leave request or calendar entry.
2. HR reviews the request and may edit or remove it before approval.
3. HR gives final approval. Only approval makes the leave official and eligible for shared availability visibility.
4. After approval, only HR may change or cancel the leave entry.

4.2 Approved leave visibility

Approved leave is not automatically visible company-wide. It may be visible to the following authorized groups through appropriate availability or HR views:

- HR.
- The employee's direct superior.
- Senior management.
- Users connected to the employee through active tasks or active projects.

4.3 Information disclosed

Information	Authorized shared view	HR-authorized record
Approved leave dates	Visible	Visible
Unavailable status	Visible	Visible
Leave type	Hidden	Visible according to HR permissions
Reason	Hidden	Visible according to HR permissions
HR comments	Hidden	Visible according to HR permissions
Attachments or private documents	Hidden	Visible according to HR permissions

4.4 Team Availability

Approved leave of connected colleagues does not appear inside the user's main personal calendar. It appears only in a separate Team Availability view.

Deferred definition

The exact users included in Team Availability has not been decided. This must be defined before implementation to prevent overexposure and inconsistent results across departments, projects, and corporate groups.

4.5 No automatic operational action

Scenario	System response
Approved leave overlaps an active task deadline	Do nothing automatically.

Scenario	System response
Approved leave overlaps a meeting	Do nothing automatically.
A task is assigned during approved leave	Allow normally; no warning.
A meeting is assigned during approved leave	Allow normally; no warning.
Leave becomes approved	Do not reassign tasks, change deadlines, or request confirmation.

5. Reminders and external calendar synchronization

5.1 Personal reminder settings

Each user controls their own reminder timing from personal settings. Company Admin and the platform do not impose one fixed reminder schedule for all users.

- Reminder preferences may be defined for meetings, tasks, deadlines, and other supported calendar items.
- Reminder configuration belongs to the user account and should follow the user across devices.
- Reminder settings do not change record permissions, due dates, or workflow approvals.

5.2 External calendar connections

The personal calendar supports two-way synchronization with Google Calendar and Microsoft Outlook.

Direction	Expected behavior
Construction OS to external calendar	Supported calendar changes may be reflected in the connected Google or Outlook calendar.
External calendar to Construction OS	Supported external calendar changes may be synchronized back into the user's Construction OS calendar.
Permissions	External synchronization must not grant access to Construction OS records beyond the user's existing permissions.
Record links	Where supported, synchronized items should retain a route back to the original Construction OS record.

Conflict handling remains open

The authoritative system and conflict-resolution rule for simultaneous or competing changes between Construction OS, Google Calendar, and Outlook have not yet been decided.

5.3 Integration safeguards

- Private HR details must never be exported as part of a generic availability event.
- A user may synchronize only calendar data they are authorized to access.

- Disconnecting an external calendar must stop future synchronization without deleting protected Construction OS source records.
- Integration failures should not alter the source record in Construction OS.

6. Themes and role-adaptive interfaces

6.1 Theme options

Theme selection is located inside each user's Settings. Every user has the following three options:

Theme	Purpose	Behavior
Platform Default	The standard Construction OS interface.	Uses the platform's default visual system and navigation.
Night Mode	A dark interface for lower-light working conditions.	Changes the visual appearance while preserving the same functionality and permissions.
Creative User Type Theme	A role- or department-specific working environment.	May substantially change interface composition, navigation, visual language, and module emphasis for the active role.

6.2 Multi-role behavior

When a user has more than one role or department context, the Creative User Type Theme changes automatically according to the currently active role or department.

- Switching active role loads the matching role-specific interface and navigation.
- The interface change must not silently expand or reduce permissions.
- Underlying data-governance rules remain authoritative regardless of theme.
- The user returns to the appropriate role interface without creating a separate account.

6.3 Role-interface examples

Active role example	Possible interface emphasis
Finance	Financial workflows, approvals, payment status, and finance-oriented navigation.
Architecture / Creative	Drawings, design reviews, visual files, tasks, and creative project navigation.
HR	People, leave, attendance, private HR workflows, and HR calendar tools.
Project Management	Project controls, milestones, tasks, meetings, inspections, and coordination.

Implementation guardrail

Creative themes may be substantially different, but they must remain different presentations of the same governed platform. Theme selection cannot bypass access control, approval rules, audit history, or record ownership.

7. Functional requirements

ID	Requirement	Priority
CAL-001	The platform shall create one personal calendar for every user.	Must
CAL-002	The personal calendar shall combine the user's agenda, assigned tasks, deadlines, meetings, approved leave, milestones, inspections, and other relevant scheduled records.	Must
CAL-003	Calendar categories shall use visually distinct colors.	Must
CAL-004	Every calendar item shall open its original source record when clicked.	Must
CAL-005	A personal calendar shall be visible only to its owner.	Must
CAL-006	Approved colleague leave shall not appear inside the owner's main calendar.	Must
AVL-001	Approved colleague leave shall be presented in a separate Team Availability view.	Must
AVL-002	Shared availability shall reveal only approved dates and Unavailable status.	Must
AVL-003	The exact population of Team Availability shall remain configurable only after the policy is defined.	Deferred
LEV-001	An employee or direct superior shall be able to create a leave request.	Must
LEV-002	HR shall provide final leave approval.	Must
LEV-003	Only HR shall be able to change or cancel an approved leave entry.	Must
LEV-004	Leave approval shall not automatically warn, reassign, reschedule, block, or alter tasks and meetings.	Must
REM-001	Each user shall control their own reminder timing.	Must
SYNC-001	The platform shall support two-way Google Calendar synchronization.	Must
SYNC-002	The platform shall support two-way Microsoft Outlook synchronization.	Must
SYNC-003	Synchronization shall not expose records beyond existing Construction OS permissions.	Must
THM-001	Settings shall offer Platform Default, Night Mode, and Creative User Type Theme.	Must
THM-002	For multi-role users, the Creative theme shall change automatically with the active role or department.	Must
THM-003	Role-specific interfaces may substantially change interface and navigation while preserving permissions and governance.	Must

8. Permission and visibility matrix

Actor	Own personal calendar	Another user's calendar	Shared approved leave	Edit approved leave
Employee	Full access	No access	According to Team Availability policy	No
Direct superior	Full access to own calendar	No access	Dates + Unavailable for authorized employee	No
Connected task/project user	Full access to own calendar	No access	Dates + Unavailable when authorized	No
Senior management	Full access to own calendar	No access	Dates + Unavailable when authorized	No
HR	Full access to own calendar	No access through personal-calendar feature	HR-authorized leave view	Yes
Company Admin / Owner	Full access to own calendar	No access by default through this feature	Only according to separate governance permissions	No unless also authorized as HR

9. Acceptance criteria

- A user opens Calendar and sees their own tasks, deadlines, meetings, agenda events, leave, milestones, and inspections in one combined view.
- Selecting a calendar item opens the correct original record without exposing records the user cannot access.
- A manager cannot open an employee's personal calendar merely because they manage that employee.
- After HR approves leave, an authorized connected user sees only the dates and Unavailable status in the separate availability experience.
- Approving leave does not reassign a task, change a deadline, produce an automatic workload warning, or prevent new assignment.
- Only HR can modify or cancel an approved leave entry.
- A user can set personal reminder timing independently of other users.
- A user can connect Google Calendar and Outlook for two-way synchronization without changing Construction OS permissions.
- A user can select Platform Default, Night Mode, or Creative User Type Theme from Settings.
- A multi-role user switching active role receives the matching role-specific interface and navigation without changing account identity or permissions.

10. Deferred decisions and parked topics

The following items were identified during discussion but were intentionally left for later definition. They are not implementation-ready requirements in this version.

Topic	Decision still required
Team Availability population	Define exactly which colleagues appear: active task links, project teams, departments, reporting hierarchy, corporate group, or another rule.
Calendar drag-and-drop	Decide whether rescheduling from the calendar is prohibited, immediate, or confirmation-based.
Calendar item creation	Decide whether users may create agenda events only or create tasks, meetings, and other records directly from Calendar.
Personal agenda and availability	Decide whether private agenda events make the user appear Busy and whether this is set per event.
External sync conflicts	Define the authoritative source and conflict-resolution workflow for competing edits.
Role-theme specifications	Define the exact interface, navigation, design tokens, and module emphasis for each role.
Change Orders / Project Variations	Full workflow was raised and postponed for later discussion.
RFI / Technical Queries	A dedicated RFI workflow was raised and postponed for later discussion.
Submittals / Material Approval	A formal submittal and material-approval workflow was raised but not decided.

Release readiness

Implementation should begin only after Team Availability membership and external synchronization conflict behavior are defined. These two decisions materially affect privacy, data consistency, and user trust.

11. Final product statement

Construction OS will provide each user with a private, unified work calendar and a separate, privacy-limited availability experience. HR remains the authority for approved leave. The calendar is informational rather than an automatic workforce-management engine. Users control reminders and may synchronize with Google Calendar and Outlook. The interface supports Platform Default, Night Mode, and role-adaptive Creative User Type themes, including substantially different navigation and working environments for the active role without changing access-control rules.

END OF PRD
