

CONSTRUCTION OS

PRD - HR Dashboard

People, Workforce, Payroll and Project Labour Role Workspace

Implementation-ready Product Requirements Document for Product, UX/UI, Frontend, Backend, Data, Security, QA and DevOps Teams.

Product purpose: Define the exact HR Manager / HR Director role shell and dashboard. The dashboard provides one concise workforce control center for employees, today's workforce, recruitment, attendance, timesheets, leave, payroll status, competence, project labour, priority work and recent activity without duplicating authoritative HR/Payroll or connected module records.

Field	Value
Document	PRD_HR_Dashboard
Version	1.0
Status	Implementation-ready role dashboard specification
Primary role	HR Manager / HR Director
Secondary role compatibility	Payroll Manager, Recruiter, Workforce Planner and HR Officer through permission-filtered views
Base requirements	PRD_HR_Payroll_Workforce + PRD_2 Role Centers
Connected domains	Projects, Work Progress, Finance, HSE, Assets, Documents, Tasks, Calendar/Meetings, Approvals
Platform alignment	Role Context, Complete Role & Permission Matrix, Platform UI/UX
Scope	HR dashboard + exact HR role shell/sidebar + drill-through behavior
Date	2026-08-07

Permanent dashboard scope lock

The HR Dashboard and HR role sidebar shall contain only the elements explicitly defined in this PRD. Developers must not add, infer, duplicate, substitute or auto-expose extra dashboard widgets, modules, charts or shortcuts without an approved PRD revision. Platform Configuration may hide approved elements; it may not create unapproved ones.

Document Authority and Source Alignment

Priority	Authority	Controls
1	Complete Role & Permission Matrix	Authorization, deny-by-default behavior, scope, field confidentiality, revocation, separation of duties and audit.
2	PRD_HR_Payroll_Workforce	Employment, attendance, timesheets, leave, payroll, training, workforce planning, project labour and HR source-of-truth rules.
3	PRD_2 - Role Centers and Cues	Fixed role dashboard regions, HR cues, Work Inbox, recent activity and operational content.
4	Projects / Work Progress	Project context, project assignments, actual physical labour usage and work-package context.
5	Finance	Posted payroll journals, payment state and financial accounting truth.
6	HSE / Assets / Documents / Tasks / Calendar / Workflow	Eligibility, asset custody, controlled files, execution, time/meeting projections and decision orchestration.
7	Role Context Navigation	HR shell remains active when shared modules are opened.
8	Platform UI/UX Architecture	Shared shell, progressive disclosure, responsive behavior, accessibility and component patterns.
9	This PRD	Exact HR dashboard composition, sidebar, metric behavior and drill-through rules.

Table of Contents

Sections	Coverage
1-5	Purpose, scope, UX principles, role shell, exact dashboard architecture
6-16	Employees, workforce today, recruitment, attendance, timesheets, leave, payroll, competence, project labour, Work Inbox and activity
17-22	Drill-through, filters, quick create, source ownership, permissions and confidentiality
23-31	State management, APIs, responsive UX, error states, performance, audit, notifications, configuration and testing
32-34	Acceptance criteria, explicit exclusions and Definition of Done
Appendices	Source alignment, architecture map and route/context map

1. Executive Purpose

- Give HR leadership one calm workspace for workforce status, people lifecycle and immediate actions.
- Make daily workforce exceptions visible before passive analytics.
- Keep sensitive payroll and personal data independently permissioned even when a user can open the HR Dashboard.
- Integrate project labour as a first-class workforce dimension without turning HR into a project-management module.
- Use source-linked metrics and deep links so the dashboard never becomes a second HR, Payroll, Finance or Work Progress database.

Final product position

HR opens Dashboard -> sees people status -> sees workforce exceptions -> sees hiring, payroll and competence state -> sees project labour -> acts through the authoritative source records.

2. Goals and Non-Goals

In scope	Out of scope
Exact HR sidebar and fixed dashboard composition	Arbitrary dashboard drag-and-drop in v1
Company/group workforce overview within authorization	Cross-company visibility without explicit scope
Employees and employment attention cues	A second Employee Record implementation inside Dashboard
Attendance, timesheet and leave projections	A replacement attendance/timesheet/leave engine
Payroll run status and restricted payroll KPIs	Automatic salary access for every HR user
Training/competence and eligibility warnings	Medical detail exposure through eligibility widgets
Project labour hours, allocation and capacity	Using project progress as proof of payable time
Work Inbox and recent activity	A second Tasks or Approvals engine

3. Core UX Principles

Principle	Required behavior
Attention before analytics	Critical payroll, attendance, contract and eligibility exceptions are visible before trend content.
People first	The user understands current workforce state immediately after login.
Privacy by design	Salary, bank, medical, disciplinary and executive compensation are independently permission controlled.
Company ownership preserved	Group consolidation never changes the legal employer/company ownership of a record.
Project-aware, not project-owned	Project labour is shown as HR/Work Progress context; Projects remain the project source of truth.
Every metric drills through	Each dashboard count/value opens the exact permission-filtered source list used to calculate it.
Progressive disclosure	Dashboard shows decisions and exceptions; full HR detail remains in registers and record pages.
No inferred confidential values	Hidden salary/payroll fields cannot be reverse-inferred from cards, totals, exports, tooltips or charts.

4. HR Application Shell

Authenticated Application

- └ Active company / group context
- └ Active HR role/workspace context
- └ HR header + permission-aware sidebar
- └ HR Dashboard / HR pages
- └ Permission-filtered shared source-module content

- Role/workspace determines the shell. Route determines page content. Permissions determine visible data and actions.
- Opening Projects, Tasks, Documents, Calendar, Finance-linked payroll status or other shared records must never switch the user away from the HR shell.
- Direct URLs, browser refresh, notifications, global search, recent items and browser history preserve active HR context.
- A multi-role user remains in HR until explicitly switching active role.

4.1 Persistent top header

Control	Required behavior
Company / Group	Shows active legal company or authorized group scope. Switching scope refreshes permissions, dashboard, search and saved views.
Period	Today / This Week / This Month / Custom where the selected widget supports time filtering.
Project filter	Optional All Projects / selected authorized Project for project-aware workforce metrics. It never grants access.
Global Search	Permission-safe search across authorized HR and linked records.
+ New	Context-aware quick create exposing only authorized HR actions.
Notifications	Permission-safe deep links into the active HR shell.
Profile / Role	Authenticated user and active role context.

4.2 Exact left sidebar

- This is the exact v1 HR sidebar hierarchy for this role shell.
- Unauthorized or configuration-disabled entries disappear with clean reflow and no dead links.
- Payroll-related entries may be hidden entirely when the active user lacks independent payroll capabilities.
- Sidebar state persists when shared modules open.

5. Dashboard Information Architecture - Exact Layout

Layout lock

These eleven dashboard regions are the complete v1 HR Dashboard. There is no generic executive KPI area, financial statement panel, sales pipeline, arbitrary chart canvas, birthdays/announcements widget or user-added region unless added by an approved PRD revision.

6. Employees

Element	Definition	Drill-through
Headcount	Active employees in current authorized company/group scope; may segment by department, project, status and employment type.	Employees register with identical active scope/filter.
New Starters	Employees whose effective employment start date falls in the selected period.	Employees filtered by start date.
Contract Expiry	Active employment contracts reaching configured expiry threshold.	Employment Contracts filtered to upcoming expiry.

- Headcount must count employment relationships, not merely user accounts.
- Group totals preserve legal employer ownership and must support company drill-down.
- Employee status and history use effective-dated HR records; dashboard does not overwrite or flatten history.

7. Workforce Today

Cue	Definition
Present	Employees with derived attendance state indicating present/working for the current day and scope.
On Leave	Employees with approved/effective leave or absence state for the current day.
Missing Attendance	Employees expected to work but lacking required attendance evidence/state under configured policy.
Overtime	Employees or hours currently exposed to overtime according to authoritative attendance/timesheet rules.

Priority behavior

Missing attendance, invalid eligibility, critical payroll validation and urgent contract expiry conditions must be visually prioritized above passive trend analytics.

8. Recruitment

Element	Required dashboard content
Vacancies	Open vacancies, age/time-to-fill status and hiring owner where authorized.
Candidates	Candidate counts by configured recruitment stage; no private candidate data in dashboard preview beyond allowed fields.
Offers	Pending, accepted, expired or declined offers based on source state.

- Clicking any recruitment element opens the authoritative Vacancy, Candidate or Offer workflow/register.
- Accepted candidate conversion creates/links the Employee Record through the HR source workflow, not through dashboard storage.

9. Attendance

- Show current attendance health, anomalies, missing events and authorized correction workload.
- Use derived attendance states from authoritative events and schedules.
- Dashboard may summarize late, absent, incomplete or correction-required records only where the source module defines those states.

- Attendance correction remains an authoritative HR action with audit; the dashboard is not an editable spreadsheet.

10. Timesheets

Status group	Purpose
Missing / Not Submitted	Expected timesheets not submitted for current period.
Submitted	Awaiting verification/review.
Verified	Verified and eligible for downstream payroll input according to rules.
Locked	Source-locked timesheet state used by payroll where configured.
Exceptions	Allocation, overlap, invalid employment/contract or other source validation errors.

- Timesheets are a key bridge between project labour and payroll.
- No dashboard action may silently lock a timesheet or override source validation.

11. Leave & Absence

Element	Behavior
Current leave	Employees currently on approved leave/absence in scope.
Pending requests	Requests requiring authorized review/decision through the source workflow.
Upcoming leave	Approved future leave affecting workforce availability.
Balance / exceptions	Only show balances or policy exceptions when the user has the required field and record permissions.

- Manager/HR access follows configured relationship and company scope.
- Medical detail is not exposed through general absence cards; use minimum necessary operational status only.
- Calendar projections remain linked to HR leave state and do not become a second leave source.

12. Payroll

Element	Required behavior
Run Status	Current payroll run lifecycle, current period and completion/lock/export state where authorized.
Validation	Count and severity of unresolved payroll validation errors requiring action.
Employer Cost	Permission-gated gross employer cost for the selected authorized payroll/company context.

Independent payroll permission

HR access does not automatically include payroll. Payroll cards, employer cost, salary-derived totals and payroll drill-through require independent payroll capabilities. Unauthorized users see no inferred value, placeholder total or concealed chart scale.

- Critical payroll validation warnings appear before non-critical trend content.
- No optimistic payroll lock, termination or salary change.
- Payroll calculations remain traceable to rules and source inputs.
- Finance owns posted journals and payment transactions; HR/Payroll owns calculation and payroll result state.

13. Training & Competence

Element	Definition
Training Compliance	Required training complete vs outstanding within current role/project scope.
Certification Expiry	Qualifications/certifications approaching configured expiry threshold.
Blocked Eligibility	Employees currently not eligible for configured work because required competence/qualification is missing or expired.

- HSE may consume eligibility status, but medical detail remains restricted.
- Dashboard does not infer employee performance from training, attendance or task activity.

14. Project Labour

Element	Definition	Source boundary
Hours	Actual authorized labour hours allocated to projects/work packages in selected period.	Timesheets/HR payable time plus Work Progress context; no direct project progress substitution.
Allocation	Employees/hours assigned by project, department, team, work package or cost code where configured.	HR owns workforce assignment/cost-rate context; Projects owns project identity/context.
Capacity	Available vs allocated workforce capacity, overcapacity and allocation gaps.	Workforce Planning calculation with transparent source values.

- Project selection filters authorized project-aware metrics but never grants project access.
- Actual labour cost must reconcile from timesheet to payroll result to Finance posting where the user is allowed to see cost.
- Where cost-rate privacy applies, the dashboard may show hours/capacity without revealing restricted monetary values.

15. Work Inbox

- HR Work Inbox consolidates actions requiring this user without copying source state.
- Priority order: critical payroll/eligibility exceptions, overdue work, due-today work, pending decisions, returned corrections, then normal tasks.
- Typical items: leave decisions, attendance corrections, missing timesheets, contract expirations, onboarding/offboarding actions, payroll validation, training gaps and recruitment actions.
- Every item identifies source module, record, company/project context, due date/priority and current stage.
- Opening an item always resolves the authoritative source record inside the HR shell.

16. Recent Activity

- Employee created/updated or employment status changed.
- Position/department assignment changed.
- Contract created, renewed, expired or terminated.
- Attendance corrected or timesheet changed state.
- Leave request submitted/approved/rejected/cancelled.
- Vacancy/candidate/offer/onboarding state changed.
- Payroll run calculated, validation changed, locked, payslips generated or exported to Finance.
- Training/certification/eligibility state changed.
- Project labour allocation changed.
- Offboarding action completed.

Activity privacy

Activity is a permission-filtered projection of authoritative events. Restricted or revoked records disappear from user-facing activity without deleting source audit history.

17. Dashboard Drill-Through Rules

Dashboard element	Destination behavior
Headcount / New Starters	Employees register with exact active filters.
Contract Expiry	Employment Contracts register filtered to threshold.
Present / Missing Attendance / Overtime	Attendance register with matching date/company/project scope.
Vacancies / Candidates / Offers	Recruitment source register or record page.
Timesheets	Timesheet register or detail page with current source status.
Leave	Leave register/request page.
Payroll	Payroll Dashboard/Run page only when separately authorized.
Training / Certification	Training & Competence source register.
Project Labour	Workforce Planning / project labour register with same scope.
Work Inbox	Exact Task/Workflow/HR source record.
Recent Activity	Canonical source record deep link.

- Counts and values must reconcile exactly with the resulting source list.
- The URL/state must preserve active company, time range and permitted project filter.
- A denied deep link returns a permission-safe state; it never leaks title, salary, medical, case or hidden count data.

18. Filters and Saved Views

Filter	Behavior
Company / Group	Required scope dimension for all dashboard data.
Department	Filters compatible employee/workforce metrics within current authorization.
Project	Filters project-aware workforce metrics only; no access expansion.
Employment Type / Status	Applies to compatible people metrics.
Period	Today, week, month or custom where source metric supports time.
Payroll Group	Visible only with required payroll capability.
Recruitment Stage	Applies to recruitment section only.

- Users may save private dashboard filters/time ranges.
- Saved filters are per user and scoped to the active company/group context.
- Changing company or role invalidates incompatible saved state rather than reusing stale authorization context.

19. + New - Exact Quick Create Behavior

Quick create option	Visibility / result
Employee	Only with employee create capability; opens authoritative hire/employee flow.
Vacancy	Only with recruitment capability.
Candidate	Only with recruitment capability.
Onboarding Plan	Only where authorized.
Leave Request	Only where the active role is allowed to create on behalf of self/employee.

Quick create option	Visibility / result
Attendance Adjustment	Only with correction capability.
Timesheet	Only where the source workflow permits creation.
Payroll Run	Only with payroll-run creation capability.
Training Record / Requirement	Only with training capability.
Offboarding Plan	Only with authorized termination/offboarding capability.

Quick Create rule

Quick Create exposes only actions authorized for the current company, role, record scope and configuration. It never bypasses HR lifecycle, payroll, approval or separation-of-duty rules.

20. Source-of-Truth Boundaries

Domain	Authoritative source	Dashboard responsibility
User authentication	User Account	Display linked identity only; never store password/MFA truth.
Professional identity	User Profile	Display permitted professional identity projection.
Employment / contracts / compensation	HR	Summarize and deep-link; never duplicate editable records.
Attendance / timesheets / leave	HR	Summarize authoritative source states.
Payroll calculation / payslips	HR/Payroll	Summarize only when independently authorized.
Project identity / assignment context	Projects	Reference authorized project context.
Physical labour usage / work progress	Work Progress	Read linked labour execution context; never rewrite project progress.
Accounting / payments	Finance	Show posting/payment status only where authorized; Finance owns journals/bank/payment truth.
Eligibility / work restrictions	HSE	Use minimum necessary eligibility projection.
Assets	Assets	Show custody/return status only where needed for onboarding/offboarding.
Files	Documents	Open controlled files/revisions; dashboard stores references only.
Execution / decisions	Tasks / Workflow	Project actions into Work Inbox; source remains authoritative.

21. Authorization and Confidentiality

Area	Requirement
Default	Deny by default. Backend authorization is mandatory for every dashboard request and drill-through.
Role	HR Manager role does not imply unrestricted payroll, medical, disciplinary or executive compensation access.
Record scope	Tenant, group, company, branch, department, manager relationship, project and employee self-access may all constrain results.
Field policy	Sensitive fields may be visible, masked, summary-only, hidden or read-only independently from page access.
Payroll	Salary, bank, payslip, deductions and payroll results require separate payroll capabilities.
Medical	Expose minimum operational fitness/eligibility only unless explicit medical access exists.
Disciplinary	Cases and evidence require independent confidentiality access.
Audit	Sensitive reads and exports are auditable.

Critical role rule

HR Director / Manager typically governs employee lifecycle, positions, leave and HR policy. Medical and payroll fields remain separately controlled. Payroll Manager / Specialist capabilities are distinct and may carry separation-of-duty controls.

22. Dashboard Isolation and Role Context

- Personal dashboard state is isolated by tenant, company/group, user, active role/workspace and authorization version.
- Backend derives user identity from the authenticated session; client-provided user IDs cannot select another user dashboard.
- Cache keys must include tenant/company/group, user, active role/authorization version, dashboard version and relevant scope filters.
- Company, role or scope changes cancel stale requests, invalidate incompatible cache and refetch authorized data.
- Late responses from a previous company/role/scope cannot overwrite the current HR Dashboard.
- Cross-user, cross-company, cross-tenant or cross-role leakage is a P0 security defect.

23. Frontend Architecture

```

HRRoleShell
├── HeaderComponent
├── HRSidebar
├── HRDashboardPage
│   ├── EmployeesSection
│   ├── WorkforceTodaySection
│   ├── RecruitmentSection
│   ├── AttendanceSection
│   ├── TimesheetsSection
│   ├── LeaveSection
│   ├── PayrollSection [permission-gated]
│   ├── CompetenceSection
│   ├── ProjectLabourSection
│   ├── WorkInboxSection
│   └── RecentActivitySection
└── SharedModuleOutlet
  
```

- Use server-state query cache with scoped invalidation.
- Keep form state isolated from source records.

- Use URL-driven filters and saved-view state.
- Use permission-aware field components and version-conflict handling.
- No optimistic salary change, payroll lock, termination or other high-risk state transition.

24. API Contract

- Dashboard aggregate endpoint may be implemented as one BFF/read-model endpoint or multiple source queries; source ownership remains unchanged.
- Every request validates tenant, company/group, active role, record scope and field policy.
- Responses include refresh/as-of metadata for metric reconciliation.
- Write actions use authoritative HR/Payroll APIs with idempotency and record version/ETag where applicable.
- Structured validation errors, correlation IDs, cursor pagination and audit metadata follow platform standards.

24.1 Minimum dashboard read contract

```
GET /hr/dashboard
scope: company/group
filters: department?, project?, period?
returns:
  employees
  workforceToday
  recruitment
  attendance
  timesheets
  leave
  payroll?           # only if independently authorized
  competence
  projectLabour
  workInbox
  recentActivity
  asOf / freshness metadata
```

25. Responsive UX and Accessibility

Breakpoint / area	Required behavior
Desktop	Two- to four-column composition; priority work and critical warnings visible without unnecessary scrolling.
Tablet	Cards stack into two-column groups; tables become compact registers with drawers.
Mobile	Work Inbox and workforce-today cues appear first; long tables become list cards; critical actions remain reachable.
Accessibility	WCAG 2.2 AA target, keyboard navigation, screen-reader labels, non-color status indicators and reduced-motion support.
Sensitive UX	Payroll values never appear in hover previews, browser notifications, unprotected tooltips or shared screens without explicit reveal.

26. Loading, Empty, Error and Partial Failure States

State	Behavior
Loading	Skeletons preserve section layout; do not show stale values as current.
Empty	Explain why no records exist and offer only authorized relevant action/deep link.
Permission hidden	Remove section/value completely; do not display zero or masked aggregate that allows inference.
Partial source failure	Keep healthy sections available; mark failed section with retry and as-of state.
Stale data	Show last refresh/as-of where freshness affects operational decisions.
Context changed	Cancel prior requests and prevent late response overwrite.
Validation conflict	Preserve user draft/input and require refresh/review; no silent last-write-wins on sensitive records.

27. Performance, Caching and Freshness

- Dashboard aggregate P95 target: ≤ 3.0 seconds for normal scoped datasets.
- Employee list P95 target: < 2.0 seconds; common search P95 target: ≤ 2.0 seconds.
- Dashboard metrics should use query/read models or governed snapshots where needed, but never store conflicting editable truth.
- Critical operational states such as payroll validation, missing attendance and contract expiry must refresh on source change/event.
- Cache invalidation must be tenant/company/user/role/scope safe.
- High-volume attendance ingestion must not block dashboard reads.

28. Audit and Observability

- Audit employee creation/update, employment transitions, position assignment, compensation changes, attendance corrections, timesheet status, leave transactions, payroll transitions, training/eligibility changes and offboarding.
- Sensitive reads/exports are logged with actor, purpose/context, scope and timestamp where policy requires.
- Observability uses structured logs, metrics, traces, correlation IDs and tenant-safe diagnostics.
- Dashboard metric mismatch, cache isolation failure, stale-role response and payroll permission leakage generate high-severity telemetry.

29. Notifications and Work Inbox Integration

- Notifications are event-driven and permission-aware; the HR Dashboard does not send messages directly.
- Typical events: contract expiry, missing attendance, timesheet due/returned, leave decision, payroll validation, training expiry, onboarding/offboarding action and recruitment action.
- Notification deep links open the source record inside the HR shell.
- Critical items remain visible in Work Inbox even when external notification delivery fails.
- Removed access stops future notifications and prevents old notifications from exposing restricted content.

30. Platform Configuration

- Configuration may enable/disable approved sidebar items, dashboard sections and actions by tenant/company/subscription/role.
- Configuration may define employment types/statuses, leave rules, payroll groups, training thresholds and other source behavior through owning modules.
- Configuration may not add an unapproved HR Dashboard widget or bypass permission/workflow rules.
- Disabled content reflows cleanly with no blank cards, dead links or hidden API leakage.

31. Testing Strategy

31.1 Unit tests

- Headcount/new starter/contract expiry metric definitions.
- Workforce Today derived-state mapping.
- Recruitment counts and offer state mapping.
- Timesheet, leave, competence and project labour aggregation.
- Payroll section permission resolution and hidden-value behavior.
- Saved filter restoration and context invalidation.

31.2 Integration tests

- Employee/contract source drill-through reconciliation.
- Attendance + schedule -> Workforce Today mapping.
- Timesheet -> project labour -> payroll input linkage.
- Payroll -> Finance posting status without confidential HR leakage.
- Training/competence -> HSE eligibility projection.
- Projects/Work Progress -> authorized project labour context.
- Tasks/Workflow -> Work Inbox projection.
- Calendar -> leave/meeting time projection without source duplication.

31.3 Security and context tests

- HR Manager without payroll capability sees no payroll value inference.
- Payroll user without disciplinary/medical access cannot retrieve those fields.
- Line manager scope cannot horizontally access unrelated employees.
- Project filter never expands project or employee access.
- Group HR consolidation preserves company boundaries and restricted child-company scope.
- HR shell persists on shared Project, Task, Document, Calendar and authorized Finance-linked routes.
- Direct URLs, refresh, notifications and search preserve HR role context.
- Cross-user, cross-company and cross-tenant negative isolation tests pass.

32. Acceptance Criteria

ID	Acceptance criterion
HRD-AC-01	HR login opens the fixed HR Dashboard and HR role shell.
HRD-AC-02	Dashboard contains exactly Employees, Workforce Today, Recruitment, Attendance, Timesheets, Leave & Absence, Payroll, Training & Competence, Project Labour, Work Inbox and Recent Activity.
HRD-AC-03	Employees contains Headcount, New Starters and Contract Expiry with source-reconciled drill-through.
HRD-AC-04	Workforce Today contains Present, On Leave, Missing Attendance and Overtime with authoritative derived states.
HRD-AC-05	Recruitment contains Vacancies, Candidates and Offers and opens authoritative recruitment records.
HRD-AC-06	Attendance and Timesheet summaries reconcile to source registers.
HRD-AC-07	Leave/absence uses source balances/statuses and does not expose medical detail without permission.

ID	Acceptance criterion
HRD-AC-08	Payroll section is independently permission-gated and exposes no inferred value to unauthorized users.
HRD-AC-09	Payroll Run Status, Validation and Employer Cost reconcile to authorized source data.
HRD-AC-10	Training/competence warnings use source qualification/eligibility state.
HRD-AC-11	Project Labour contains Hours, Allocation and Capacity and preserves Projects/Work Progress/HR ownership boundaries.
HRD-AC-12	Work Inbox prioritizes source-linked actionable HR work and stores no duplicate task/approval state.
HRD-AC-13	Recent Activity is permission-filtered and source-linked.
HRD-AC-14	Every dashboard metric drills into the matching pre-filtered source list.
HRD-AC-15	Group/company scope changes refresh all permissions, filters, search, cache and dashboard state.
HRD-AC-16	Shared modules open inside the HR shell without automatic role switching.
HRD-AC-17	Permissions are enforced on backend responses, fields, aggregates, deep links, exports and activity.
HRD-AC-18	Sensitive reads/exports are auditable.
HRD-AC-19	Disabled features reflow cleanly with no dead links or blank spaces.
HRD-AC-20	Desktop, tablet and mobile layouts remain usable and WCAG 2.2 AA compliant.
HRD-AC-21	No dashboard data crosses users, companies, tenants or stale authorization contexts.
HRD-AC-22	No unapproved dashboard widget or sidebar item is present.

33. Explicitly Not Allowed

- Additional HR dashboard KPI cards, charts or widgets not defined in this PRD.
- Birthdays, announcements, AI assistant or social widgets unless added by an approved PRD revision.
- A generic CEO/executive dashboard inside HR.
- Automatic salary/payroll access because a user is an HR Manager.
- Exposing medical, disciplinary, bank, identification or executive compensation through aggregate inference.
- Treating a User Account or User Profile as the authoritative Employee Record.
- Duplicating Projects, Work Progress, Finance, HSE, Assets, Documents, Tasks, Calendar or Workflow business records inside HR Dashboard storage.
- Using physical project progress as proof of payable time or payroll state.
- Using attendance/task activity to automatically score employee performance.
- A shared module changing the active user into another role shell.
- User rearrangement of dashboard regions in v1.

34. Definition of Done

1. Exact HR sidebar, header and Dashboard layout are implemented.
2. All eleven dashboard regions reconcile to authoritative source data and deep links.
3. Payroll and sensitive HR fields pass independent permission tests with zero inferred leakage.
4. Project Labour integration reconciles hours/allocation/capacity while preserving project and work-progress ownership.
5. Role/context persistence and permission filtering pass all shared-route and direct-link tests.

6. Dashboard scope lock is respected with zero unapproved elements.
7. Responsive, accessibility, loading, empty, error and partial-failure states pass visual QA.
8. Performance and cache isolation targets pass with representative enterprise data.
9. Security, audit and negative isolation tests pass with zero critical defects.

Final implementation rule

If an element is not defined in PRD_HR_Dashboard, it does not appear on the HR Dashboard or HR role sidebar. New dashboard content requires an approved PRD revision.

Appendix A. Source Alignment Matrix

PRD decision	Source alignment
Employees / Headcount / New Starters / Contract Expiry	HR Dashboard KPI groups: headcount and employment.
Workforce Today	HR Dashboard KPI group: present, on leave, missing attendance, overtime exposure and unavailable.
Recruitment	HR Dashboard KPI group: open positions, time to fill, candidates by stage and accepted offers.
Payroll	HR Dashboard KPI group: run status, validation errors, gross payroll, employer cost and variance; this PRD exposes only Run Status, Validation and Employer Cost.
Training & Competence	HR Dashboard KPI group: training compliance, certification expiry and blocked eligibility.
Project Labour	HR Dashboard KPI group: actual hours, project labour cost, allocation gaps and overcapacity; user-approved dashboard map freezes Hours, Allocation and Capacity.
Every metric drills through	HR-DB-001 and HR analytics rule: every metric opens source records.
Critical warnings first	HR-DB-002: payroll and eligibility warnings above trend analytics.
Payroll independently permissioned	HR-DB-004, HR security rules and Complete Role & Permission Matrix.
Company/group preservation	HR-DB-003 and HR source rule for legal employer/company ownership.
Work Inbox / Recent Activity	Platform Role Center and Work Inbox architecture.
Fixed dashboard / no drag-drop	PRD_2 and Platform UI/UX baseline.
HR shell persistence	Role Context and Shared Module Navigation PRD.

Appendix B. Full HR Dashboard Architecture Map

Appendix C. Role-to-Source Architecture

Appendix D. Route and Context Map

Example route	HR context behavior
/app/hr	HR Dashboard in HR shell.
/app/hr/employees	Employees register in HR shell.

Example route	HR context behavior
/app/hr/employees/{employeeId}	Employee Page in HR shell with field-level confidentiality.
/app/hr/attendance	Attendance register in HR shell.
/app/hr/timesheets/{id}	Timesheet record in HR shell.
/app/hr/leave/requests/{id}	Leave request in HR shell.
/app/hr/payroll/runs/{id}	Payroll Run page in HR shell only if separately authorized.
/app/hr/workforce	Workforce Planning / Project Labour in HR shell.
/app/projects/{projectId}	Shared Project page opens inside HR shell when authorized.
/app/tasks/{taskId}	Shared Task opens inside HR shell.
/app/documents/{documentId}	Shared Document opens inside HR shell.
/app/calendar	Calendar opens inside HR shell with permitted projections.

Route implementation principle

The exact URL scheme may vary in the route registry. The invariant is mandatory: active HR role/workspace resolves the shell; the route resolves shared content; permissions resolve data and actions.
